Website audit

Avon Auto & Truck and Alpine Tire Co.

avonautoandtruck.com | Avon and Glenwood Springs, Colorado

Homepage review, mobile PageSpeed results and a 4-week action plan

Prepared 10 October 2026

Summary

This review looks at the homepage of avonautoandtruck.com as it appeared on 10 October 2026. It combines what is visible on the site with a Google PageSpeed Insights mobile report run the same day. The site already does many things well. The main opportunity is how fast it loads on a phone and how accessible it is to people using assistive tools.

Performance	Accessibility	Best Practices	SEO	Agentic Browsing
23	72	73	77	1/4

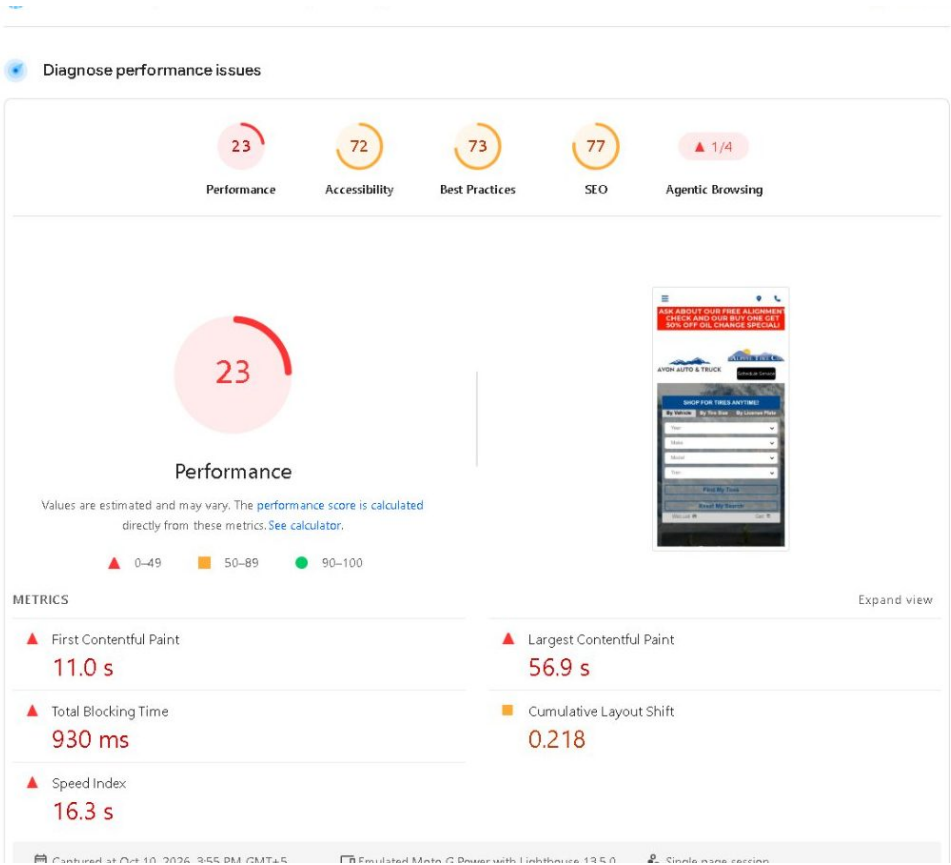

Source: Google PageSpeed Insights, mobile, captured 10 Oct 2026 (emulated Moto G Power, Lighthouse 13.5.0). Scores are estimates and may vary between runs.

Metric	Result
First Contentful Paint	11.0 s
Largest Contentful Paint	56.9 s
Total Blocking Time	930 ms
Cumulative Layout Shift	0.218
Speed Index	16.3 s

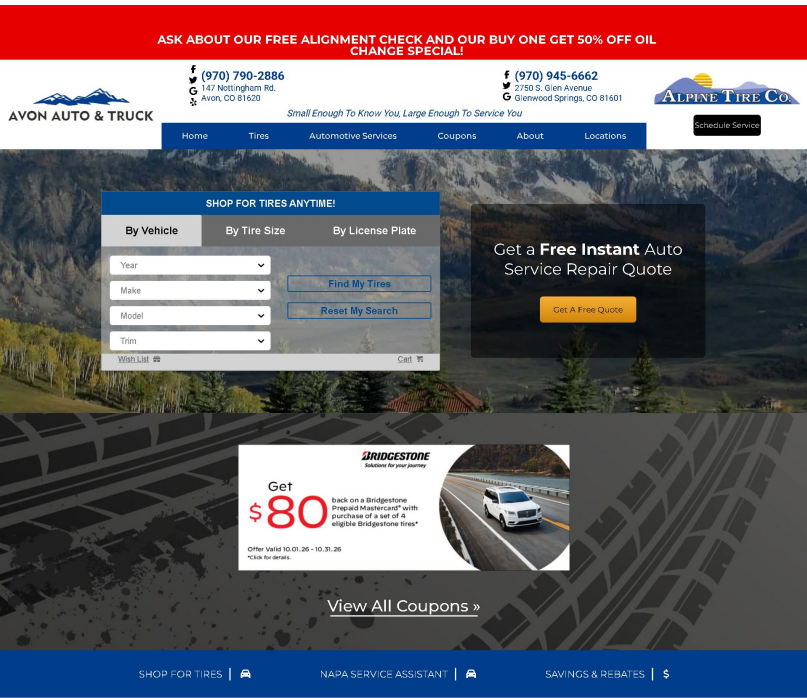

A largest-content time of 56.9 seconds on mobile means a visitor on a phone may wait close to a minute before the main page content is fully shown. This is the single most important number in this report.

Evidence

PageSpeed Insights, mobile report (10 October 2026)

Homepage, desktop capture (10 October 2026), top of page

Findings

Each item names the area, the specific problem, a priority and a concrete fix. Items marked **to verify** could not be confirmed from the information available and are listed so they can be checked, not as findings.

Area	Problem	Priority	Suggested fix
Speed	Mobile Performance score 23. Largest Contentful Paint 56.9 s, First Contentful Paint 11.0 s, Total Blocking Time 930 ms (PageSpeed).	High	Compress and resize images, defer non-critical JavaScript and CSS, load the tire finder after the main content.
Accessibility	PageSpeed flags buttons and links without an accessible name, images without alt attributes, form fields without labels, and low color contrast.	High	Add labels and alt text, raise text contrast, add a main landmark and fix heading order.
Layout stability	Cumulative Layout Shift 0.218, above the 0.1 target.	Medium	Reserve space for images, banners and the tire finder so content does not jump while loading.
Header	Two brands, two phone numbers, two addresses and social icons share one header, so the first thing a visitor sees is crowded.	Medium	Single clear header: logo, menu, one call button, and a shop switcher for Avon and Glenwood Springs.
Offers	The Bridgestone rebate is an image, so its text is not available to screen readers or search engines. The red top banner link points to "#".	Medium	Publish offers as real text and link the banner to the Coupons page.
Booking	The "Schedule Service" button links to "#!". It may open a script-driven form (to verify).	Medium	Make the booking path obvious: call, free quote, or schedule, with the same button on every page.
Store hours	Hours are on the About and Locations pages (Mon to Fri, 8:00 AM to 5:30 PM at both shops) but not on the homepage.	Medium	Show hours and an open/closed status next to each shop on the homepage.
SEO	Meta keywords tag is filled in, but search engines no longer use it. PageSpeed also notes non-descriptive and non-crawlable links.	Low	Remove meta keywords, use descriptive link text, keep title and description current.
Content	Long paragraphs in small type over a photo background reduce readability on small screens.	Low	Shorter blocks, larger type and a plain background behind text.

Not confirmed

The number of images missing alt text, structured data (schema), and the mobile layout across real devices could not be checked for this review. They are recommended checks for the first week of work.

What the site already does well

- Both shops are clearly presented, each with its own address and phone number.
- A Free Instant Quote button is prominent in the hero area.
- Customer reviews appear on the homepage.
- Current manufacturer rebates and a free alignment check are promoted.
- Trust marks are shown: ASE certified, NAPA AutoCare Center, BBB Accredited Business and a BusinessRate Best of 2026 badge for Alpine Tire Co.
- A tire finder lets visitors search by vehicle, tire size or license plate.
- Fleet services and trailer repair and tires have their own content.

Interface review

The current homepage packs a lot of useful information into the first screen: a promo banner, two shop blocks, a tire finder, a quote button and a rebate banner. Each is useful on its own, but together they compete for attention, and the largest visual (a banner image) carries text that cannot be read by assistive tools. A cleaner hierarchy would put one decision first (find tires, get a quote, or call), show which shop is nearest, and keep the rebates one scroll below.

A platform note

The site runs on the Net Driven platform, and the tire finder and catalog are part of it. The plan below therefore focuses on the homepage and on fixes that can be made without removing those integrations. Some speed items may depend on the platform vendor.

4-week action plan

Week	Focus	Work
1	Measure and fix the basics	Re-run PageSpeed on key pages, list every image without alt text, fix accessible names and labels, remove meta keywords.
2	Speed	Compress and resize images, defer non-critical scripts and styles, reserve space to remove layout shift, re-test on mobile.
3	Homepage redesign	Build the new home page: simplified header, shop switcher with hours and open status, offers as real text, clear call and quote buttons.
4	Review and launch	Test at phone, tablet and desktop widths, check accessibility, go live and compare PageSpeed before and after.

Demo and next steps

We built a concept of the redesigned home page using your own content and photos:

softosync.github.io/client-demos/avon-auto-truck/. It is a demonstration only and is not indexed by search engines.

Work can be delivered in phases, starting with speed and accessibility fixes. Pricing can be shared on a short call.
