

Website Audit

silvercpas.com

Mike Morones & Associates, LLC

CPA firm, Silver City, NM

Findings from Oct 10, 2026 (Google PageSpeed, mobile)

Prepared by Muhammad Zain, Softosync

softosync.com | zain@softosync.com | +92 308 2615761

Summary

This audit covers the homepage of **silvercpas.com** and the Contact page, read directly from the live site, together with a Google PageSpeed Insights mobile report captured on Oct 10, 2026 at 10:00 PM (emulated Moto G Power, slow 4G, Lighthouse 13.5.0). All scores below are copied from that report. Field data from real users was "No Data", so these are lab results.

Category	Score	Reading
Performance	58	Needs work (50-89 band)
Accessibility	87	Needs work (50-89 band)
Best Practices	77	Needs work (50-89 band)
SEO	100	Excellent
Agentic Browsing	3/3	All checks passed

Core metrics (mobile)

Metric	Result	Status
First Contentful Paint	7.2 s	Poor
Largest Contentful Paint	10.0 s	Poor
Speed Index	7.2 s	Poor
Total Blocking Time	30 ms	Good
Cumulative Layout Shift	0.003	Good

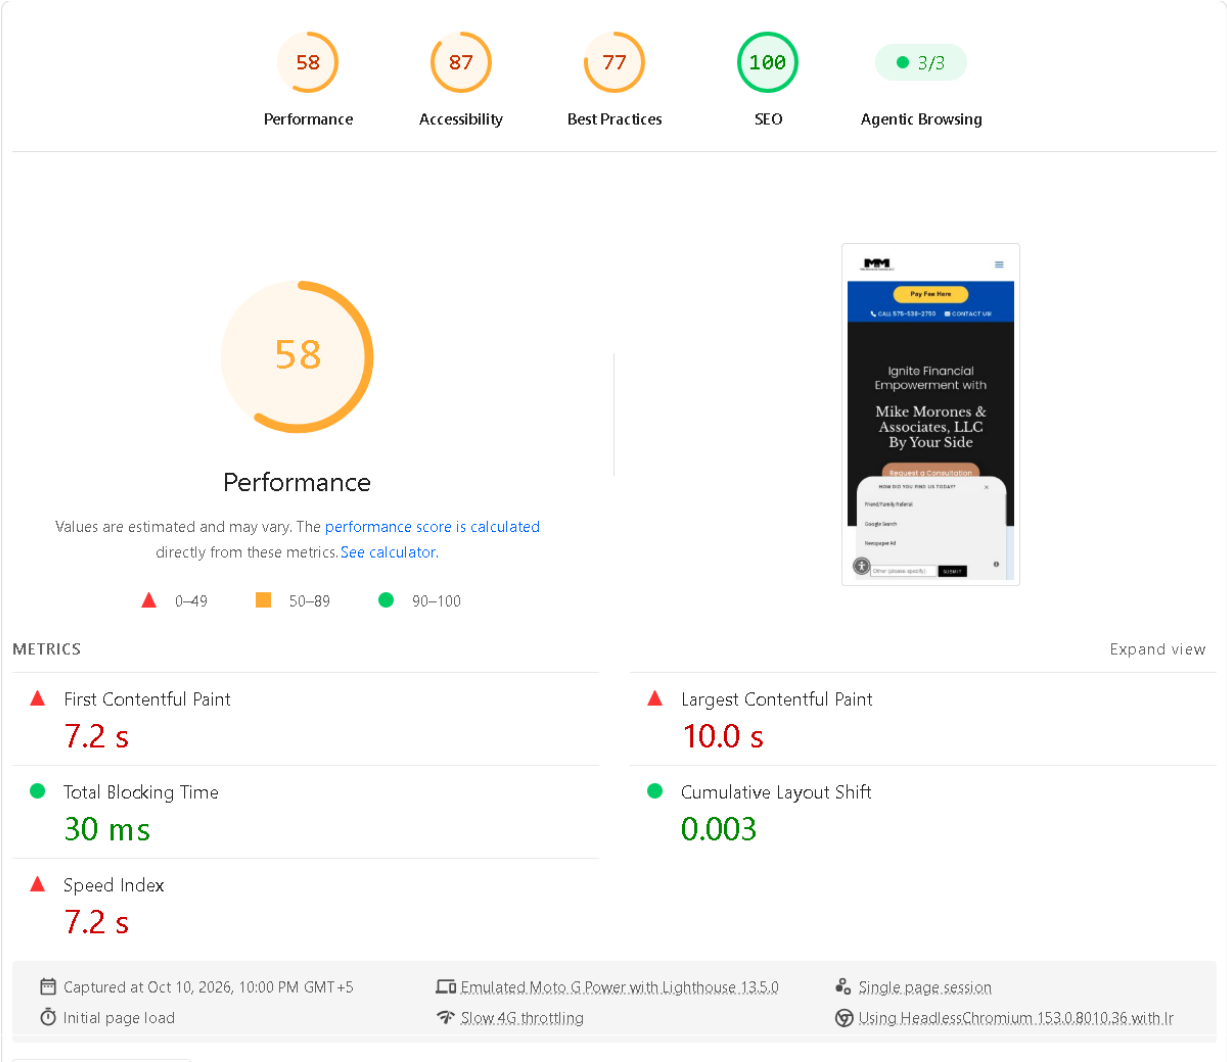

What it means

The site already does the hard parts well: search basics (SEO 100), a stable layout, and strong client reviews. The main weakness is how long a phone takes to show the first screen. In this test the main content appeared after 10.0 seconds, which risks losing a first-time visitor before they read the reviews or see the phone number. The fixes are practical and well understood, and most are technical rather than design problems.

Top three priorities: (1) cut the mobile load time, (2) re-enable pinch-zoom and fix the accessibility flags, (3) add an easy way to book a consultation online.

Screenshot evidence

Google PageSpeed Insights, mobile report, Oct 10, 2026

Scores and metrics as reported. The preview thumbnail also shows a "How did you find us today?" pop-up over the hero buttons on the mobile capture (to verify on a real device).

Opportunities and diagnostics reported by PageSpeed

INSIGHTS		
▲	Render-blocking requests — Est savings of 940 ms	▼
▲	Use efficient cache lifetimes — Est savings of 132 KiB	▼
▲	Font display — Est savings of 240 ms	▼
▲	Forced reflow	▼
▲	Network dependency tree	▼
■	Improve image delivery — Est savings of 61 KiB	▼
■	Legacy JavaScript — Est savings of 45 KiB	▼
○	Layout shift culprits	▼
○	Optimize DOM size	▼
○	LCP breakdown	▼
○	3rd parties	▼
These insights are also available in the Chrome DevTools Performance Panel - record a trace to view more detailed information.		
DIAGNOSTICS		
▲	Reduce unused JavaScript — Est savings of 246 KiB	▼
■	Minify CSS — Est savings of 14 KiB	▼
■	Minify JavaScript — Est savings of 21 KiB	▼
■	Reduce unused CSS — Est savings of 54 KiB	▼
■	Avoid enormous network payloads — Total size was 13,686 KiB	▼
○	Avoid long main-thread tasks — 3 long tasks found	▼
○	Avoid non-composited animations — 2 animated elements found	▼
More information about the performance of your application. These numbers don't directly affect the Performance score.		

Render-blocking requests (est. 940 ms), cache lifetimes (132 KiB), font display (240 ms), image delivery (61 KiB), legacy JavaScript (45 KiB), unused JavaScript (246 KiB), unused CSS (54 KiB), and a total network payload of 13,686 KiB.

Accessibility and best-practice flags

BEST PRACTICES

- ▲ `[user-scalable="no"]` is used in the `<meta name="viewport">` element or the `[maximum-scale]` attribute is less than 5.
- ▲ Touch targets do not have sufficient size or spacing.
- ▲ Document does not have a main landmark.

These items highlight common accessibility best practices.

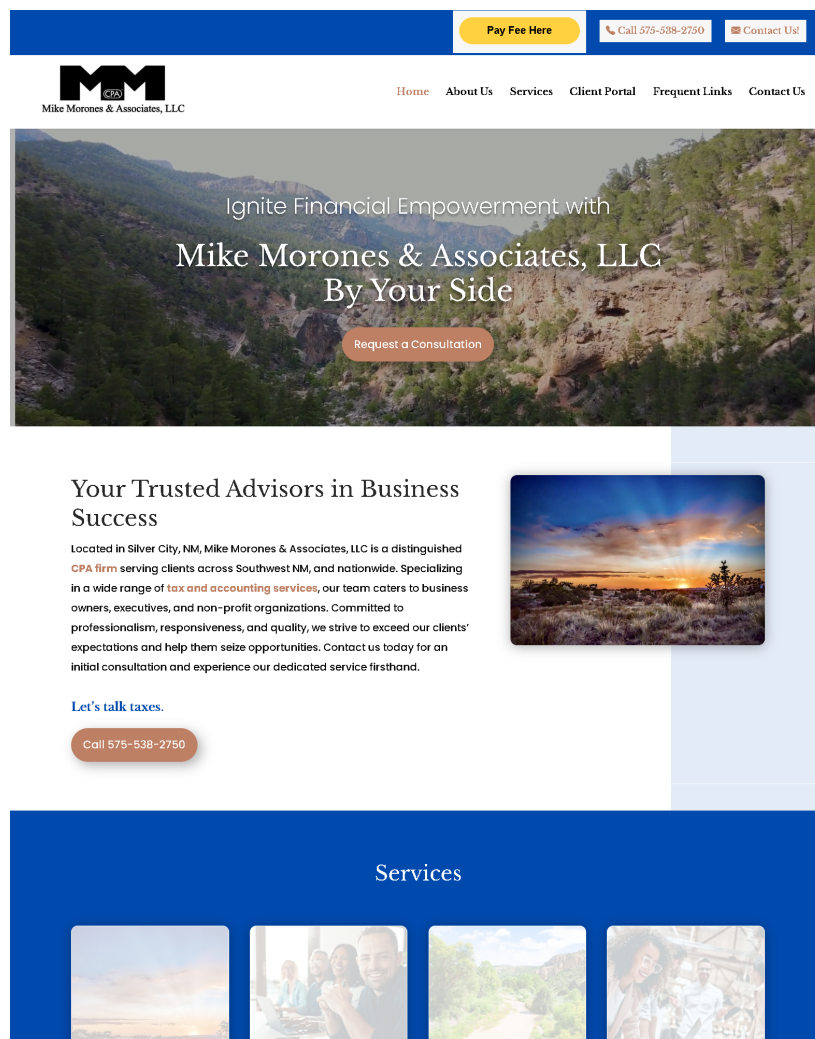

CONTRAST

- ▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

The viewport tag restricts zoom, touch targets lack size or spacing, the document has no main landmark, and text contrast is insufficient in places. Best Practices also lists a deprecated API and browser console errors.

Current homepage (desktop capture)

Homepage as captured on Oct 10, 2026.

Issues and fixes

Each item lists what was found, its priority, and a concrete fix. Items marked "to verify" could not be fully confirmed from the sandbox and are shown as observations, not findings. Not yet checked in depth: About Us and Services pages, image alt-text counts, heading structure and schema (PageSpeed reports structured data as valid).

Area	Finding	Priority	Recommended fix
Speed	Largest Contentful Paint is 10.0 s and First Contentful Paint 7.2 s on mobile (PageSpeed).	High	Make the hero text or image the main element, preload it, and defer everything non-essential.
Page weight	Report shows a 13,686 KiB payload. The homepage loads a header video (Video-Header.mp4); it is a likely contributor (to verify).	High	Replace the autoplay video with a compressed poster image, or load the video on desktop only.
Code delivery	Render-blocking requests (est. 940 ms), unused JavaScript (246 KiB), unused CSS (54 KiB), unminified CSS and JS, short cache lifetimes (132 KiB).	Medium	Defer scripts, remove unused theme modules, minify files, set long cache lifetimes.
Accessibility: zoom	The viewport tag sets user-scalable=0 and maximum-scale=1.0, which blocks pinch-zoom for people who need larger text. Confirmed in the page source.	High	Remove both restrictions from the viewport tag.
Accessibility: other	PageSpeed flags small touch targets, no main landmark, and insufficient colour contrast.	Medium	Enlarge tap areas, wrap page content in a main element, adjust the failing colours.
Best practices	Browser console errors and one deprecated API warning are logged.	Medium	Identify the failing script (likely a plugin or embed) and fix or remove it.
Social sharing	The Contact page's og:image is the PayPal wordmark, so shared links show PayPal's logo. Confirmed in the page source.	Medium	Set a branded image for each page.
Content location	"Expert Insights" is loaded through an embed from a third-party host (railway.app). It may not count as content on silvercpas.com (to verify).	Medium	Publish article summaries and links natively on the site.
Conversion	Calls to action are phone and a contact form. No online scheduling was found on the pages checked.	Medium	Add a booking option beside "Request a Consultation".
Pop-up	The mobile capture shows a "How did you find us today?" survey over the hero buttons (to verify on a real device).	Low	Move it lower on the page or show it after the visitor has scrolled.
Brand name	Several reviews say "M&K" or "Morones & Knuttinen", while the site says "Mike Morones & Associates" (to verify whether the name changed).	Low	Add a short line explaining the firm's history so returning clients recognise it.

UI review

Observed on the homepage capture and page content:

Top of page. A yellow "Pay Fee Here" button, phone number and "Contact Us!" sit above the navigation, and the hero offers "Request a Consultation". Contact paths are easy to find. On a phone, the pop-up and the stacked buttons compete for the same space.

Hero. A full-width video with a thin serif headline over a landscape. It sets a regional tone, but the text sits on a busy moving background and costs load time.

Services. Seven tiles for Individual, Partners, C Corporation, S Corporation, Trust & Estate, Payroll and Gross Receipts Tax. Photos are faded and not tied to the service, so the white labels carry all the meaning.

Credibility. A press row (HelloNation, Morningstar, Yahoo Finance), dated articles and Google reviews build trust well. They are far down the page and arrive late on a slow connection.

Footer. Address, hours (Monday to Thursday, 8:30 am to 5:00 pm), phone, fax and email are all present and current (2024-2026).

Strengths

- **SEO score of 100** with a clear title and meta description.
- **Stable layout** (CLS 0.003) and low blocking time (30 ms).
- **Strong social proof:** Google reviews on the page and national features in HelloNation, Morningstar and Yahoo Finance.
- **Fresh content:** expert articles dated June 2026.
- **Clear local details:** address, phone, hours and a client portal.
- **Easy payment:** a "Pay Fee Here" button is always visible.

4-week action plan

When	Focus	Tasks
Week 1	Quick wins	Remove zoom restriction from the viewport tag. Replace the og:image on the Contact page. Compress images and set caching. Move the survey pop-up lower.
Week 2	Speed	Replace or defer the header video, defer render-blocking scripts, remove unused CSS and JavaScript, and minify files. Re-run PageSpeed.
Week 3	Accessibility and fixes	Enlarge tap targets, add the main landmark, correct contrast, and clear the console errors and deprecated API warning.
Week 4	Conversion and content	Add online booking, publish "Expert Insights" natively on the site, and add a short note on the firm's name history.

Homepage demo

We built a preview of a redesigned homepage using your own text, contact details and colours. It loads without a header video, keeps your phone number and consultation button visible, and shows whether the office is open right now, based on your Monday to Thursday hours.

View the demo: <https://softosync.github.io/client-demos/silvercpas/>

The demo is a preview only and is not indexed by search engines. Images load from silvercpas.com.

Next steps

1. A 20-minute call or online meeting to walk through this audit and the demo.
2. A phased proposal: speed and accessibility first, then the redesign, then booking and content.
3. Pricing for each phase shared after the call.
