Summary

Bay Brothers has a clear message, five well-defined services, and consistent contact details on every page. The Google PageSpeed results below show a solid technical base. The main opportunities are on the visitor side: phone and hours are not on the first screen, all five services share one page, and part of the navigation is in Spanish on an English site.

Google PageSpeed Insights, mobile (from the screenshot provided)

Category	Score	Reading
Performance	78	Orange band (50 to 89). Room to speed up.
Accessibility	93	Green band (90 to 100).
Best Practices	100	Green band. Full marks.
SEO	92	Green band.
Agentic Browsing	1/4	Flagged red. Suggests the page is hard for automated agents to read.

There is no real-user (field) data for this site yet. Desktop scores were not provided, so they are not reported here.

What this audit is based on

- The PageSpeed mobile screenshot provided (scores above).
- The page text of the Home, About us and Contact pages, including address, phone, email and hours.
- Items that need the rendered page or the full PageSpeed report (image alt text count, meta description, heading structure, schema, individual performance metrics) are marked **to verify** and are not presented as findings.

Top three priorities

- **Put the phone number and hours on the first screen.** There is no call button, and the main action and every service button lead to the contact form.
- **Give each service its own page** so it can show up for searches like brake service or wheel alignment in San Francisco.
- **Make the content readable without JavaScript** so search engines and AI assistants can see it.

Evidence: PageSpeed Insights, mobile

Screenshot supplied for this audit.

Zoom: the mobile first screen. Business name and menu icon at the top, the headline, a short paragraph, and two buttons (Schedule appointment, Learn more). No phone number or hours are visible on this screen.

Findings and recommended fixes

Area	What we found	Priority	Recommended fix
Rendering and SEO	The raw HTML our fetch received had only a generic title ("Hostinger Horizons") and no body content, so the page appears to be built in the browser with JavaScript. PageSpeed's Agentic Browsing 1/4 points the same way. The rendered title, meta description and what crawlers see: to verify .	High	Pre-rendered or static pages, a unique title and meta description per page, LocalBusiness schema, llms.txt.
Mobile first screen	The hero has two buttons, "Schedule appointment" and "Learn more". Phone number and hours are not on the first screen, and every service button ("Get quote", "Book now") goes to the contact page.	High	Click-to-call button in the header and hero, hours and address near the top, a Maps link.
Visitor information	Hours (Mon to Sat, 8:00 AM to 6:00 PM) appear only on the Contact page.	High	Show hours and an "open now" indicator on the home page and in the footer.
Service pages	The menu has three items (Home, About us, Contact). All five services sit on one page, so none can rank on its own.	High	One page per service (tires, balancing, alignment, oil and fluids, brakes) with local wording.
Language consistency	The site is in English but uses Spanish labels and URLs: "Acerca de nosotros", "Contacto", /acerca-de, /contacto, "Política de privacidad", "Términos de servicio", "Política de reembolso".	Medium	English labels and URLs with redirects, or a proper English/Spanish switcher with language tags.
Trust signals	The site mentions premium brands, extended warranties, certified technicians and thousands of satisfied customers, but shows no brand names, warranty terms, certifications or customer reviews.	Medium	Brand logos, review stars or quotes, certification badges, warranty summary (details to be confirmed by the owner).
Pricing	The site promises transparent pricing but shows no prices or ranges. Four of five services use "Get quote".	Medium	"From" prices or ranges for common jobs, and a stated response time for quotes.
Team section	The four team members (Luis Prato, Jose Prato, Jean Carrero, Jackson Benitez) are shown with initials. Whether real photos exist on the live page: to verify .	Medium	Real photos and a short line about each person, tied to the family-shop story.
Performance	Mobile Performance is 78 (orange). The individual metrics and opportunities were not in the screenshot, so the exact causes are to verify .	Medium	Review the full PageSpeed report, then optimise images and scripts.
Accessibility	Score 93. Which checks did not pass is to verify .	Low	Fix the items listed in the full report.

UI review (mobile first screen)

Based on the PageSpeed preview image, which shows the first screen on a phone. A review on real devices is still recommended.

- **Clear message.** The headline says what the business does and where: professional tire and auto services in San Francisco.
- **Two actions, neither one is a call.** A filled "Schedule appointment" button and a grey "Learn more" button. For someone with a tire problem right now, a visible "Call" button is the faster path.
- **Small supporting text on a dark photo.** The paragraph under the headline is small in the preview and sits over a busy image. Contrast and size on a real phone: **to verify**.
- **Header.** Business name in small type with a menu icon. The phone number is not in the header.
- **Consistent footer.** Address, phone and email repeat on every page, which is good for trust and local search.

Strengths

- Best Practices score of 100 and SEO score of 92 on mobile.
- Five services described in plain language, each with three short selling points.
- A real family story: founded by brothers Luis and Jose Prato, with the team named and given roles.
- Full contact details (address, phone, email, hours) and a contact form with a service-type selector.
- Privacy, terms and refund pages are in place, and the copyright year is current (2026).

Four-week action plan

When	Focus	What happens
Week 1	Quick fixes	Click-to-call and hours in header and hero. English labels and URLs with redirects. Review the full PageSpeed report and fix the top items.
Week 2	Service pages and local SEO	Five service pages, unique titles and descriptions, LocalBusiness schema, internal links, Maps link.
Week 3	Trust and pricing	Brand logos, reviews, certifications, warranty summary, price ranges, real team photos (content from the owner).
Week 4	Crawlability and testing	Pre-rendered pages, llms.txt, re-run PageSpeed on mobile and desktop, final checks on real phones.

Homepage demo

We built a demo of a new home page using only your own content: your headline, services, story, team, address, phone, email and hours. It puts the call button and hours on the first screen, shows an "open now" indicator based on your posted hours, and uses a rolling wheel as its signature touch. Photos were not available to us, so the demo uses no photography. Your own shop and team photos would go in their place.

[Open the demo](https://softosync.github.io/client-demos/bay-brothers-tire-auto/)

<https://softosync.github.io/client-demos/bay-brothers-tire-auto/>

Proposed phases

- **Phase 1, quick fixes** on the current site (week 1 above).
- **Phase 2, full redesign** with a page for each service, trust content and pricing (weeks 2 and 3).
- **Phase 3, ongoing local SEO** and monthly PageSpeed checks (week 4 and after).
- Pricing for each phase is available on request.

Next steps

- A 15-minute call or video meeting this week to go through the findings and the demo.
- You tell us which phase you would like to start with.
- You share photos and any details we should not guess (warranty terms, certifications, brands you carry).
