

Website audit

Avon Auto & Truck and Alpine Tire Co.

avonautoandtruck.com | Avon, CO and Glenwood Springs, CO

Prepared by Softosync

10 October 2026

Muhammad Zain, Founder | zain@softosync.com | +92 308 2615761

Summary

We reviewed the homepage of avonautoandtruck.com using a mobile Lighthouse (PageSpeed Insights) run supplied for this audit, a full-page desktop screenshot of the homepage, and the live page content. The site already does the important things well: both shops are easy to call, there is a free-quote path, a tire finder, current rebates, reviews and trust badges. The main opportunity is speed and mobile experience. On the test below, the largest element on the page took 56.9 seconds to appear on an emulated mid-range phone over slow 4G.

Mobile Lighthouse scores, 10 October 2026. Scale: 0 to 49 poor, 50 to 89 needs improvement, 90 to 100 good.

Key mobile metrics

Metric	Result	What it means for a visitor
First Contentful Paint	11.0 s	Time until anything appears on screen.
Largest Contentful Paint	56.9 s	Time until the largest element (the main hero content) is visible.
Total Blocking Time	930 ms	The page is busy and slow to respond to taps while loading.
Cumulative Layout Shift	0.218	Content moves while loading, which can cause mis-taps.
Speed Index	16.3 s	How quickly the page visually fills in.
Total page size	16,739 KiB	About 16.3 MiB to load the homepage.

How this test was run

- Lighthouse 13.5.0, emulated Moto G Power, slow 4G throttling, single page load, captured 10 Oct 2026 at 3:55 PM (GMT+5).
- This is a lab test from one run. The timestamp shows it was run from a GMT+5 time zone, so results measured from a US location may differ. We recommend repeating it from the US before final targets are set.
- PageSpeed shows "No Data" for real-user (field) results, so this audit relies on lab data only.

Evidence: PageSpeed Insights

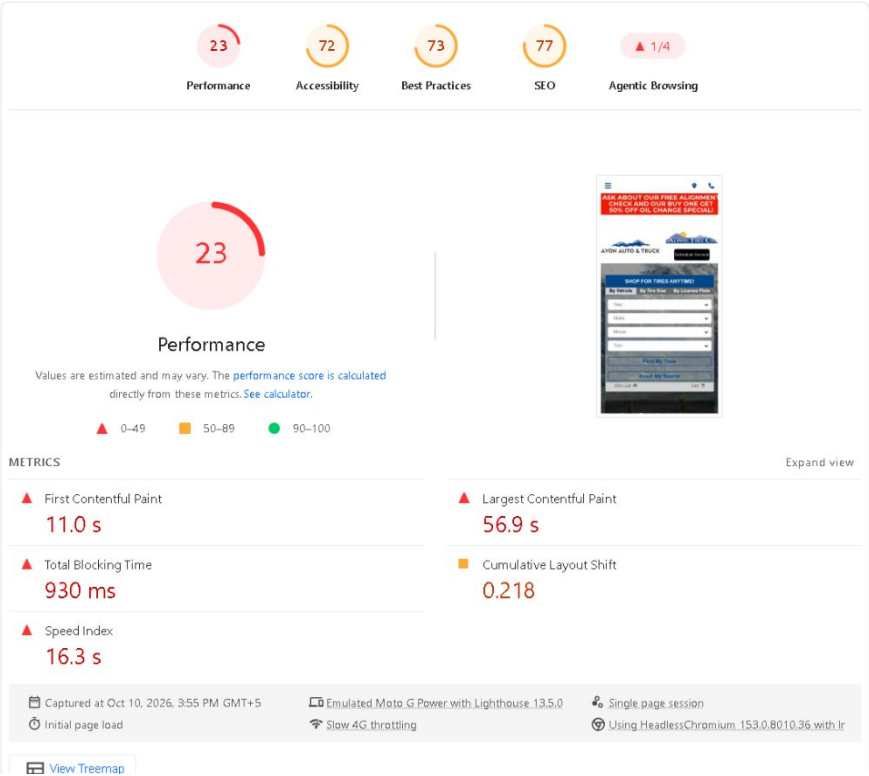

Figure 1. Mobile scores and core metrics from the supplied PageSpeed Insights report (10 Oct 2026).

NAMES AND LABELS	
▲ Buttons do not have an accessible name	▼
▲ Image elements do not have <code>[alt]</code> attributes	▼
▲ Form elements do not have associated labels	▼
▲ Links do not have a discernible name	▼
○ Image elements do not have <code>[alt]</code> attributes that are redundant text.	▼
These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.	
ARIA	
▲ <code>[aria-hidden="true"]</code> elements contain focusable descendents	▼
These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.	
CONTRAST	
▲ Background and foreground colors do not have a sufficient contrast ratio.	▼
These are opportunities to improve the legibility of your content.	
BEST PRACTICES	
▲ Touch targets do not have sufficient size or spacing.	▼
▲ Document does not have a main landmark.	▼
These items highlight common accessibility best practices.	
NAVIGATION	
▲ Heading elements are not in a sequentially-descending order	▼
These are opportunities to improve keyboard navigation in your application.	

Figure 2. Accessibility checks flagged in the same report.

Findings and recommended fixes

Every item below comes from the supplied PageSpeed report or the homepage itself. Priority reflects likely impact on visitors and on search visibility.

Area	Problem	Priority	Recommended fix
Speed	Performance score 23/100. FCP 11.0 s, LCP 56.9 s, Speed Index 16.3 s, TBT 930 ms on mobile.	High	Preload and compress the hero image, remove render-blocking resources, deliver a lighter first view.
Page weight	Total payload 16,739 KiB. Report estimates about 3,336 KiB savings from better image delivery and about 3,047 KiB from unused JavaScript.	High	Serve modern image formats at the right size, lazy-load below the fold, ship only the JavaScript each page needs.
Render blocking	Render-blocking requests could save an estimated 4,510 ms.	High	Inline critical CSS, defer the rest, load scripts asynchronously.
Accessibility	Score 72. Buttons and links without accessible names, images without alt text, form fields without labels, low colour contrast, no main landmark, heading order out of sequence.	High	Add labels and alt text, fix contrast, add a main landmark, correct the heading hierarchy.
Mobile usability	Touch targets lack sufficient size or spacing.	Medium	Enlarge tap areas to at least 48 px with spacing, especially in the menu and the tire finder.
Layout stability	CLS 0.218. Image elements have no explicit width and height.	Medium	Set image dimensions and reserve space for banners and the finder.
Main thread	JavaScript execution 6.9 s, main-thread work 11.1 s, 20 long tasks, 51 animated elements.	Medium	Remove unused scripts, split long tasks, use compositor-friendly animation.
SEO	Score 77. Some images have no alt text, one link has no descriptive text, and some links are not crawlable.	Medium	Use descriptive alt text and link text, and real anchor links with href.
Trust and safety	Best Practices 73. The page requests the visitor's location on load, logs console errors and uses deprecated APIs (3 warnings).	Medium	Ask for location only after a tap on "Use current location"; clean up console errors.
AI search readiness	Agentic Browsing 1/4. ai-catalog.json schema is invalid and the accessibility tree is not well formed.	Low	Fix semantic markup, add valid structured data so assistants can read services, shops and hours.
Caching and CSS	About 278 KiB cache savings, about 201 KiB unused CSS, about 103 KiB CSS to minify.	Low	Longer cache lifetimes for static files, purge and minify CSS.

Homepage design review

Based on a full-page desktop screenshot of the homepage taken on 10 October 2026.

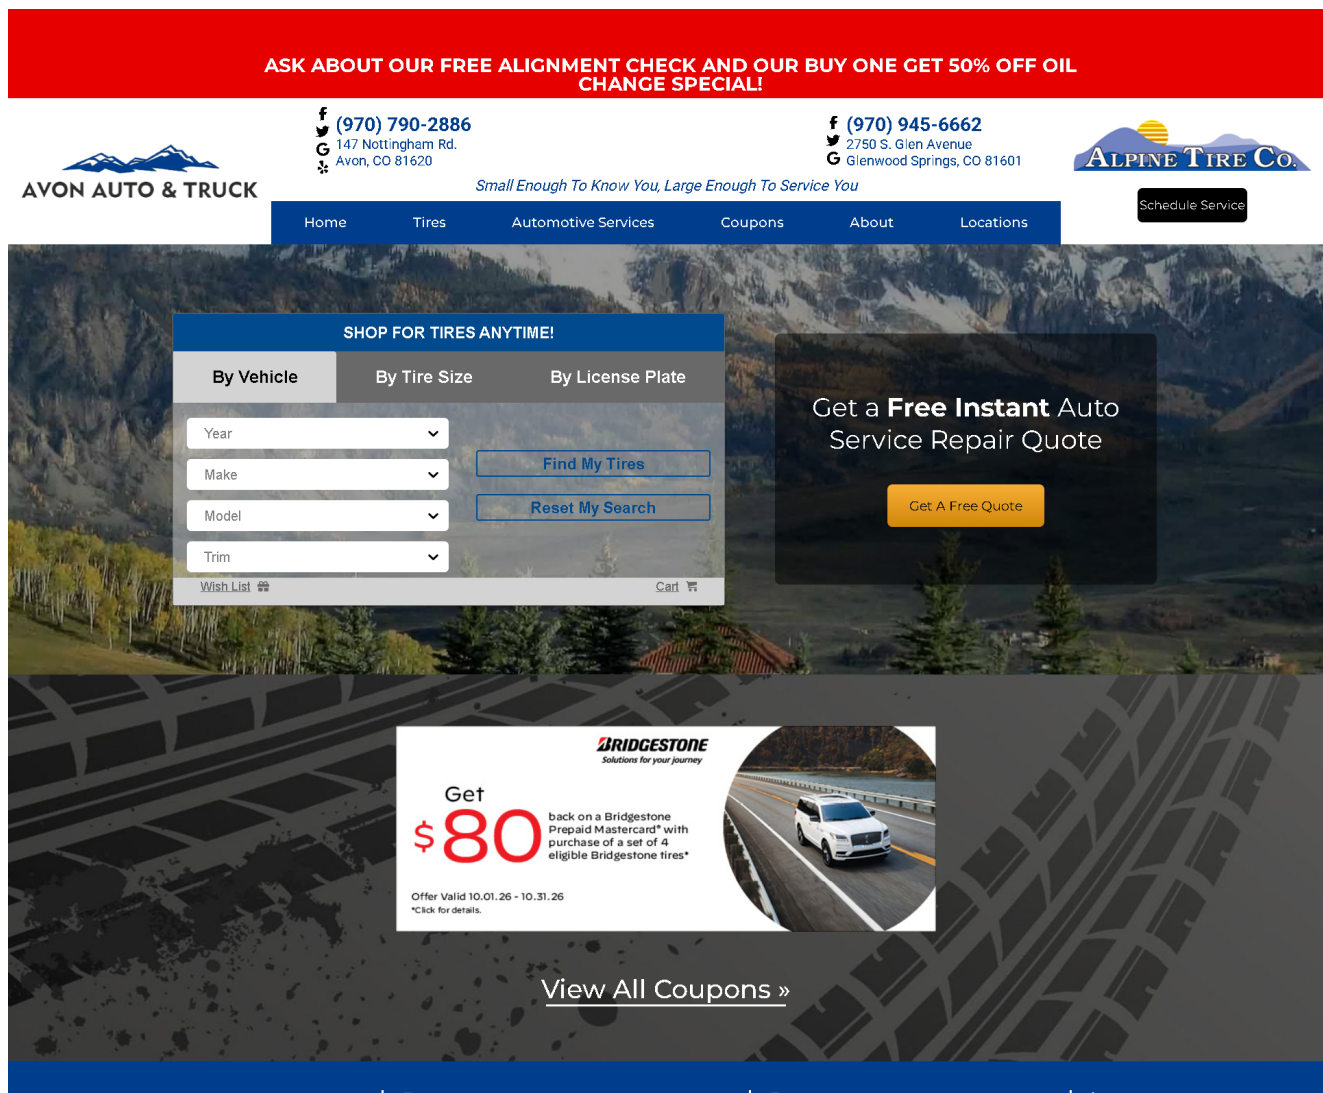

Figure 3. Header, hero with tire finder, and current offer.

What we noticed

- **Header:** both shops, their phone numbers and addresses, social icons and the main menu all sit in one band. Visitors can reach either shop quickly, though the band is dense.
- **Hero:** the tire finder (By Vehicle, By Tire Size, By License Plate) and the "Get a Free Instant Auto Service Repair Quote" button are the right primary actions for this business.
- **Offers:** the red banner and the Bridgestone rebate give the page a clear promotional focus.
- **Welcome section:** long paragraphs in small type over a dimmed photo background are harder to scan, especially on a phone.
- **Reviews:** one testimonial is shown at a time in a carousel, so most visitors will see only one.
- **Store hours:** hours do not appear on the homepage in the screenshot. They may be on the location pages (to verify).

Strengths worth keeping

- Both locations, phone numbers and addresses are visible in the header, with a clear call to action.
- A free-quote button and a tire finder by vehicle, size and license plate sit above the fold.
- Current manufacturer rebates and a free alignment check and oil change special are promoted prominently.
- Real customer reviews, plus ASE Certified, NAPA AutoCare Center and BBB Accredited badges, and a BusinessRate "Best of 2026" award for Alpine Tire Co.
- Complete service coverage: tires, brakes, alignments, batteries, tune-ups, state inspections, fleet services and trailer repair and tires.
- A title and meta description are present, and the copyright year is current.

Items to verify with your team

- The site runs on the Net Driven (Tire One Digital) platform according to the page footer. Which fixes can be made inside the platform and which need a new front end should be confirmed.
- Page text extracted from the homepage contained unresolved placeholders such as [GEOTITLE]. These may be filled in by JavaScript in a browser; we have not treated them as a finding.
- Mobile layout beyond the PageSpeed thumbnail has not been reviewed on a real device.

Four-week action plan

Week	Focus	Outcome
1	Speed quick wins	Compress and preload the hero image, defer non-critical scripts and CSS, remove the on-load location prompt, set image dimensions.
2	Accessibility and SEO	Alt text, button and link names, form labels, contrast, main landmark, heading order, descriptive links.
3	Homepage redesign	Mobile-first homepage built from your own content, with the two-shop call buttons and the tire finder front and centre.
4	Test and launch	Re-run PageSpeed from the US, check on real phones, add structured data, then go live.

Homepage redesign preview

We built a working homepage concept using your own services, offers, brands, reviews and contact details. It is fully responsive and is not connected to your live site.

- A hero built around your own line, "Small enough to know you, large enough to service you", with a pin for each shop. Choose Avon or Glenwood Springs and the call buttons switch to that shop.
- A sticky call button on phones, the tire finder and free-quote paths one tap away, and your rebates in a clean list.
- Readable text, labelled controls and descriptive alt text throughout.

Portfolio: <https://softosync.com/portfolio>

Next steps

- A short call or online meeting to walk through the findings and the demo (15 minutes is enough).
- Agree the order of work. We usually deliver in phases, starting with speed and mobile fixes, then the full redesign. Pricing for each phase is shared after the call.
- Confirm whether you would like us to work inside the current platform or build a new front end.
