1. Summary

Mt. Tam Racquet Club has a strong story: over 50 years in Marin, indoor and outdoor courts, heated pools, a gym and a café, and members who describe the club as their "home away from home". The homepage already shows pricing, hours, phone and email. The main opportunity is the mobile experience: Google PageSpeed measures the homepage at 66/100 on mobile, and the largest element takes 5.0 s to appear. This audit lists what we verified on the live site, what to fix first, and what a redesigned homepage could look like (demo link on the last page).

66	77	88	92
Performance	Accessibility	Best Practices	SEO

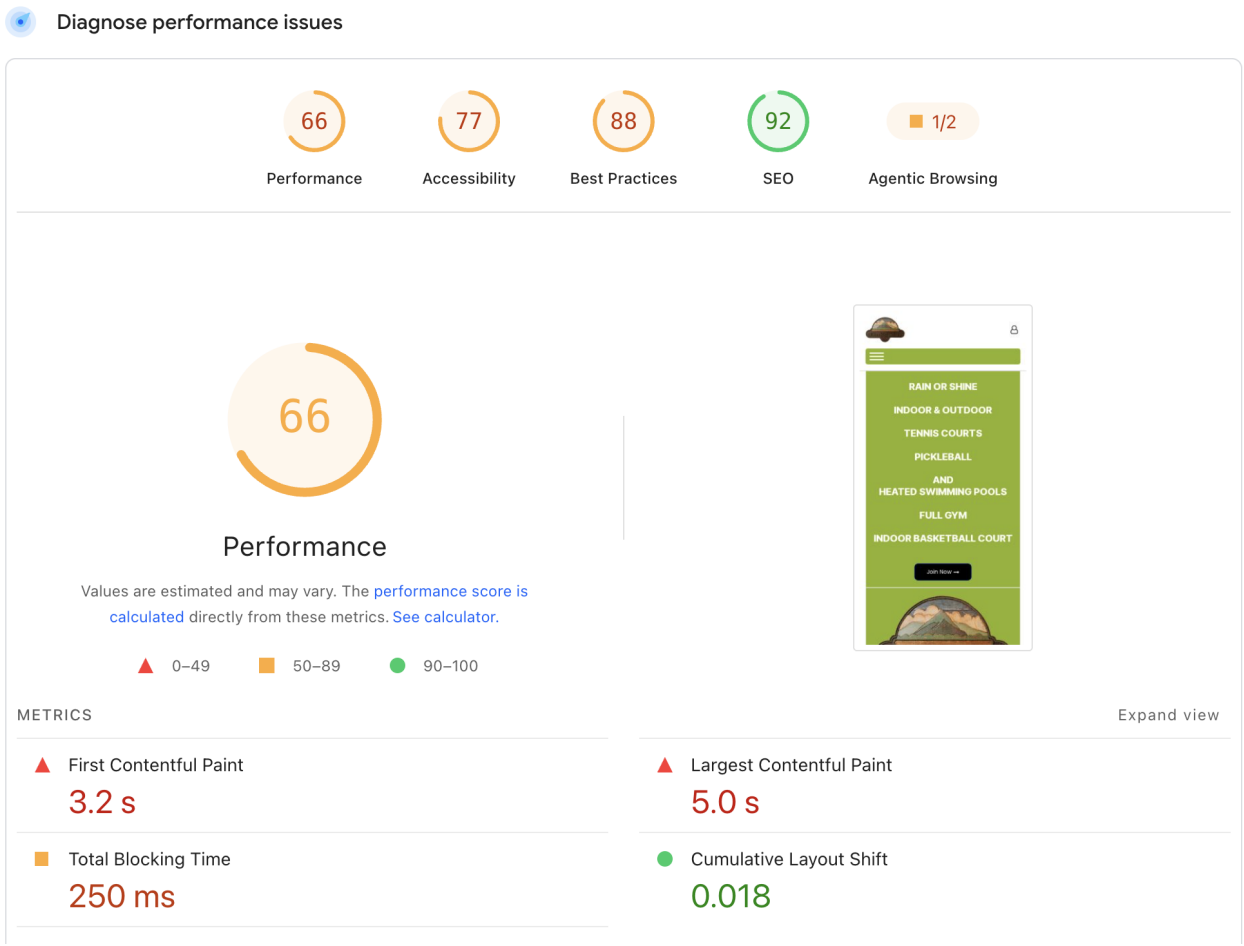

Source: Google PageSpeed Insights, mobile run supplied by Softosync (screenshot in section 2). Scores are estimates and can vary between runs.

Metric (mobile)	Result	Google's rating
First Contentful Paint	3.2 s	**Poor**
Largest Contentful Paint	5.0 s	**Poor** (good is 2.5 s or less)
Total Blocking Time	250 ms	**Needs improvement**
Cumulative Layout Shift	0.018	**Good**

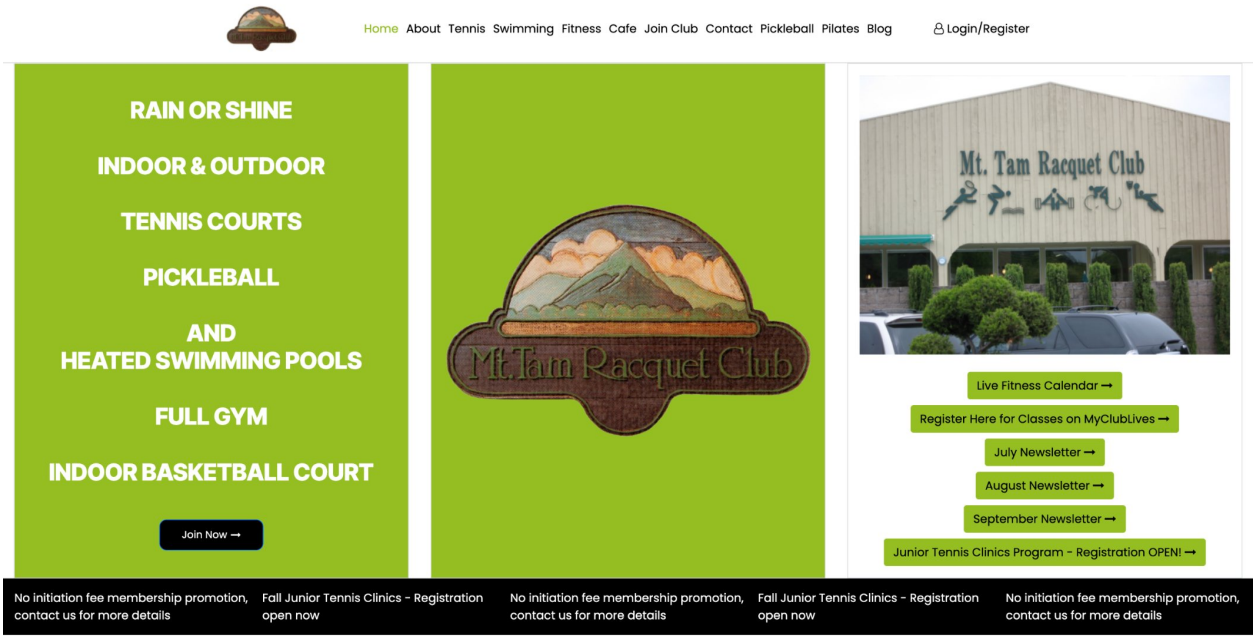

What we could not check

Our review environment could not open mttamrc.com directly, so page content was read through a text fetch and your screenshots. Items that depend on the raw HTML (exact alt-text count, structured data, desktop PageSpeed run) are marked **to verify**.

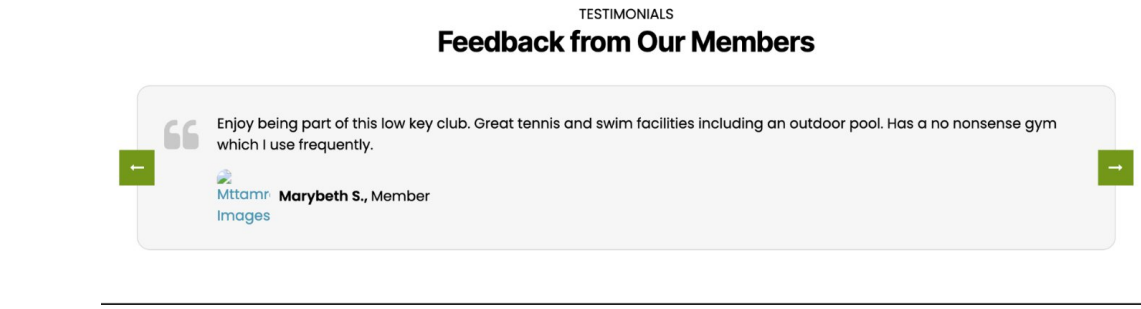

2. Evidence

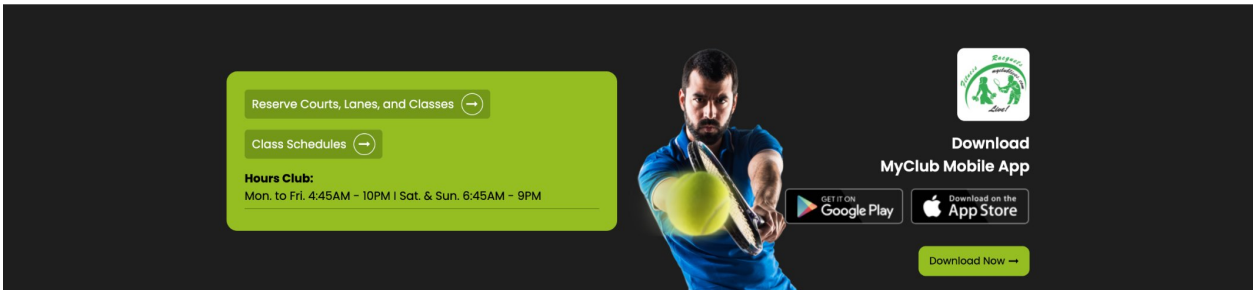

Google PageSpeed Insights, mobile: Performance 66, Accessibility 77, Best Practices 88, SEO 92. FCP 3.2 s, LCP 5.0 s, TBT 250 ms, CLS 0.018. The mobile preview shows the text-only green hero block.

Homepage top section: the first screen is three columns (text list, logo, building photo) with six link buttons under the photo.

Testimonials: the member photo shows a broken image placeholder with alt text "Mttamr Images" instead of a picture.

App section: the App Store and Google Play badges and the "Download Now" button all link to the homepage (mttamrc.com/) rather than to the app listings.

3. Issues and fixes

Area	Problem	Priority	Fix
Performance	Mobile LCP is 5.0 s and FCP 3.2 s. The first screen loads several large images.	**High**	Convert hero images to WebP at display size, preload the main hero image, lazy-load everything below the fold.
Mobile first screen	On phones the hero is a text-only green block listing amenities; the logo and the photo appear below it.	**High**	Lead with a real photo of the club, one short headline, and two buttons: Join Now and Reserve a court.
Broken links	Both app-store badges and "Download Now" link to mttamrc.com/ (the homepage).	**High**	Link to the real Google Play and App Store listings for the MyClub app.
Heading (H1)	The H1 is the amenities list ("Rain or Shine, Indoor & Outdoor, Tennis Courts..."). It does not name the club or Larkspur.	**Medium**	H1: club name and location; move the amenities list to a sub-headline.
Images	Testimonial member photos do not load. Several images in the fetched page have an empty alt attribute (exact count: to verify).	**Medium**	Fix or remove the broken images; write short descriptive alt text for every photo.
Accessibility	Accessibility score is 77 on mobile (specific failing audits: to verify in the full report).	**Medium**	Review contrast on the green buttons and white text, add labels and alt text.
Structured data	Local business schema: to verify.	**Medium**	Add LocalBusiness / SportsActivityLocation schema with address, hours, phone.
Repeated content	The same six links (calendar, MyClubLives, three newsletters, junior clinics) appear twice; the promo ticker repeats three times.	**Low**	Keep one set of links; one ticker.
Content freshness	The homepage lists July, August and September newsletters. October issue: to verify.	**Low**	Move old issues into a newsletter archive page; feature the current one.
Naming	"Mt. Tam Racquet Club" and "Mt. Tam Racquet & Athletic Club" are both used.	**Low**	Use one consistent name.
Links	Some internal links (Join Now, newsletter PDFs) use http:// instead of https://.	**Low**	Update to https:// links.

4. UI review

- **Brand colour:** the lime green is memorable and fits an outdoor sports club. Used as a full-bleed block behind white text it is hard to read; a darker green for text areas would help.
- **First screen:** three equal columns compete for attention. One clear focal point (a photo of the courts or pool) and one primary button would guide visitors faster.
- **Link buttons:** six small green buttons under the building photo (calendar, classes, three newsletters, junior clinics) look like equal-priority links. Grouping them under "Members" and "Programs" would make each easier to find.
- **Pricing:** the two membership cards (Tennis, Swim / Fitness) are clear. Showing what dues cover (monthly or annual: to verify) would remove a question before people call.
- **Photos:** stock-style fitness images mix with real club photos. More real photos of the courts, pools and staff would feel more like Mt. Tam.

5. What is already working

- Pricing for both membership types, plus the initiation-fee-as-spending-credit offer, is visible on the homepage.
- Club hours (Mon to Fri 4:45 AM to 10 PM, Sat and Sun 6:45 AM to 9 PM), phone, email and address are easy to find.
- "Join Now" is visible on the first screen, and booking runs through the MyClub app and MyClubLives.
- Four detailed member testimonials, including long-time members of 25 years.
- Clear title and meta description, HTTPS, indexable pages, copyright year is current (2026), SEO score 92.
- Layout shift is low (CLS 0.018): the page does not jump while loading.

6. Four-week action plan

When	Focus	What we do
Week 1	Speed and fixes	Compress and resize hero and section images, preload the hero image, fix the app-store links, remove or fix the broken testimonial images, add alt text.
Week 2	Mobile first screen	New hero with a real club photo, single headline with club name and location, Join Now and Reserve buttons. Clean up the H1 and heading order.
Week 3	Content and structure	Group member links, move old newsletters into an archive, show pricing details, add local business schema, switch remaining links to https.
Week 4	Test and launch	Re-run PageSpeed and accessibility checks on mobile and desktop, fix what remains, launch the new homepage.

The work can be done in phases: speed and mobile fixes first, then the full homepage redesign, then optional extras. Pricing is discussed after a short call.

7. Demo

We built a redesigned homepage using only content from your current site. View it here: https://softosync.github.io/client-demos/mt-tam-racquet-club/

8. Next steps

Our portfolio: softosync.com/portfolio. Softosync also builds mobile apps (Flutter and Android) and AI automation, for example an AI assistant that answers member questions or takes class bookings.

Pick whichever is easiest: a 15-minute call, or a chat on WhatsApp Business at +92 308 2615761.
