Website audit

Canvas & Cafe

canvasandcafe.com | Foster City, Burlingame & San Francisco

Prepared for Deepa Menon | Prepared by Muhammad Zain, Softosync

Based on a Lighthouse mobile report and PageSpeed field data, both run on Oct 15, 2026

1. Summary

Canvas & Cafe has strong social proof: 100+ company logos, EY, Meta and Google testimonials, and a Yelp Badge of Excellence for 2023 and 2024. The site's message is clear and the owner's name and phone number are public. The main gap is how the site performs on a phone: the Lighthouse mobile test took 17.9 s to show the largest element, and the page has a few conversion gaps that make it harder for a corporate planner to book quickly.

Lighthouse mobile scores (Moto G Power emulation, slow 4G)

Category	Score	Reading
Performance	**46**	Needs work (0-49 band)
Accessibility	**92**	Good, 2 items to fix
Best Practices	**96**	Good, security headers open
SEO	**100**	Passed all automated checks
Agentic Browsing	**1/2**	Accessibility tree not well-formed

Lab metrics (mobile)

Metric	Lab result
First Contentful Paint	4.1 s
Largest Contentful Paint	17.9 s
Total Blocking Time	510 ms
Cumulative Layout Shift	0
Speed Index	8.7 s
Total page size	2,950 KiB

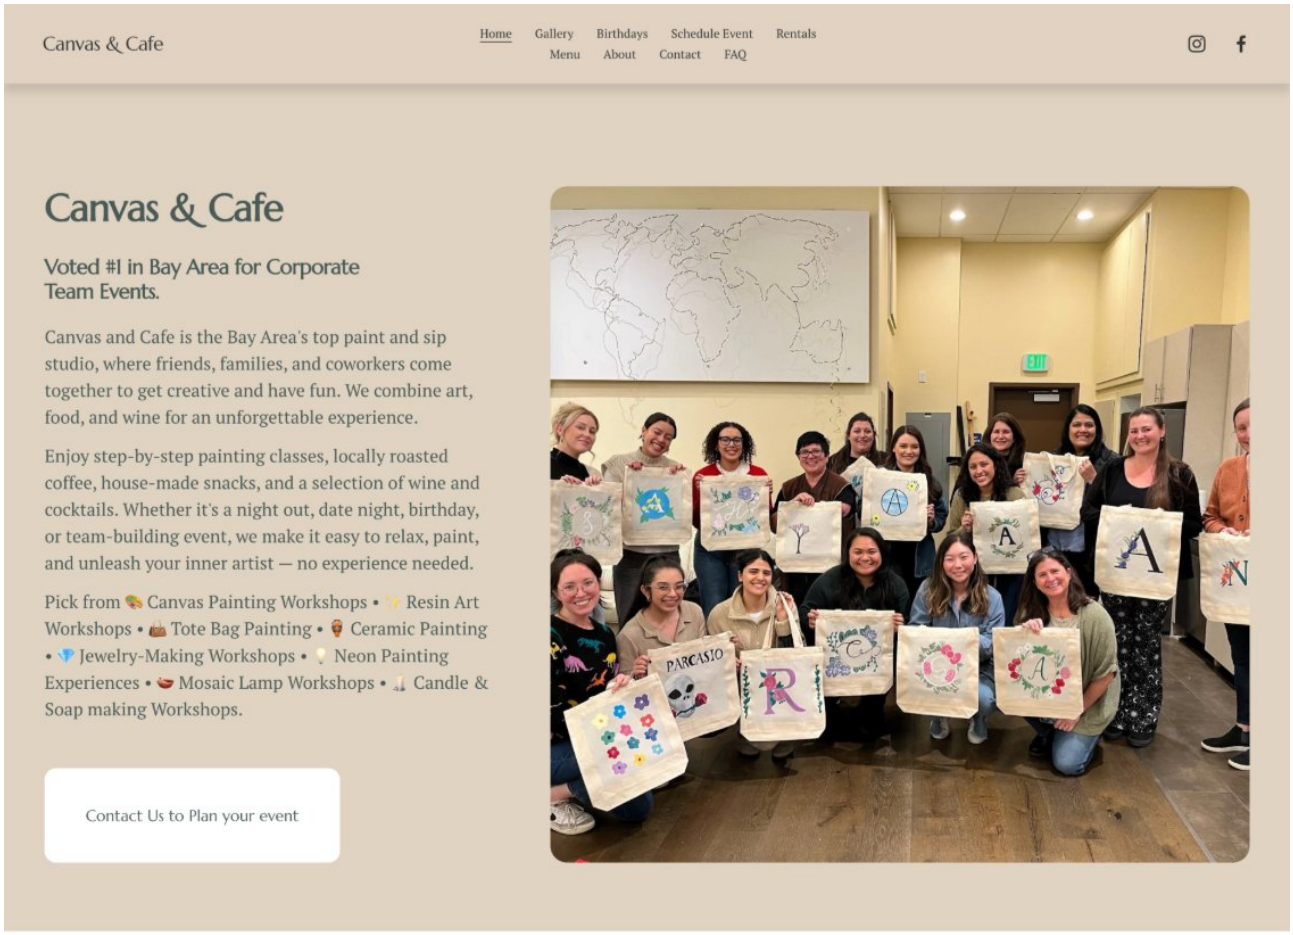

Real-user data (Chrome UX Report, Sep 16 to Oct 13, 2026, whole origin)

Metric	Mobile	Desktop
LCP	3.4 s (Core Web Vitals failed)	2.6 s (failed)
FCP	2.1 s	1.2 s
TTFB	0.7 s	0.3 s
CLS	0.02	0.01
INP	No data	43 ms

How to read this: the lab test simulates a slow phone on a slow network, so 17.9 s is a worst case. Real visitors see 3.4 s on mobile, which is much better but still outside Google's 2.5 s "good" limit. On mobile only 37% of real page loads reach that limit.

2. Screenshot evidence

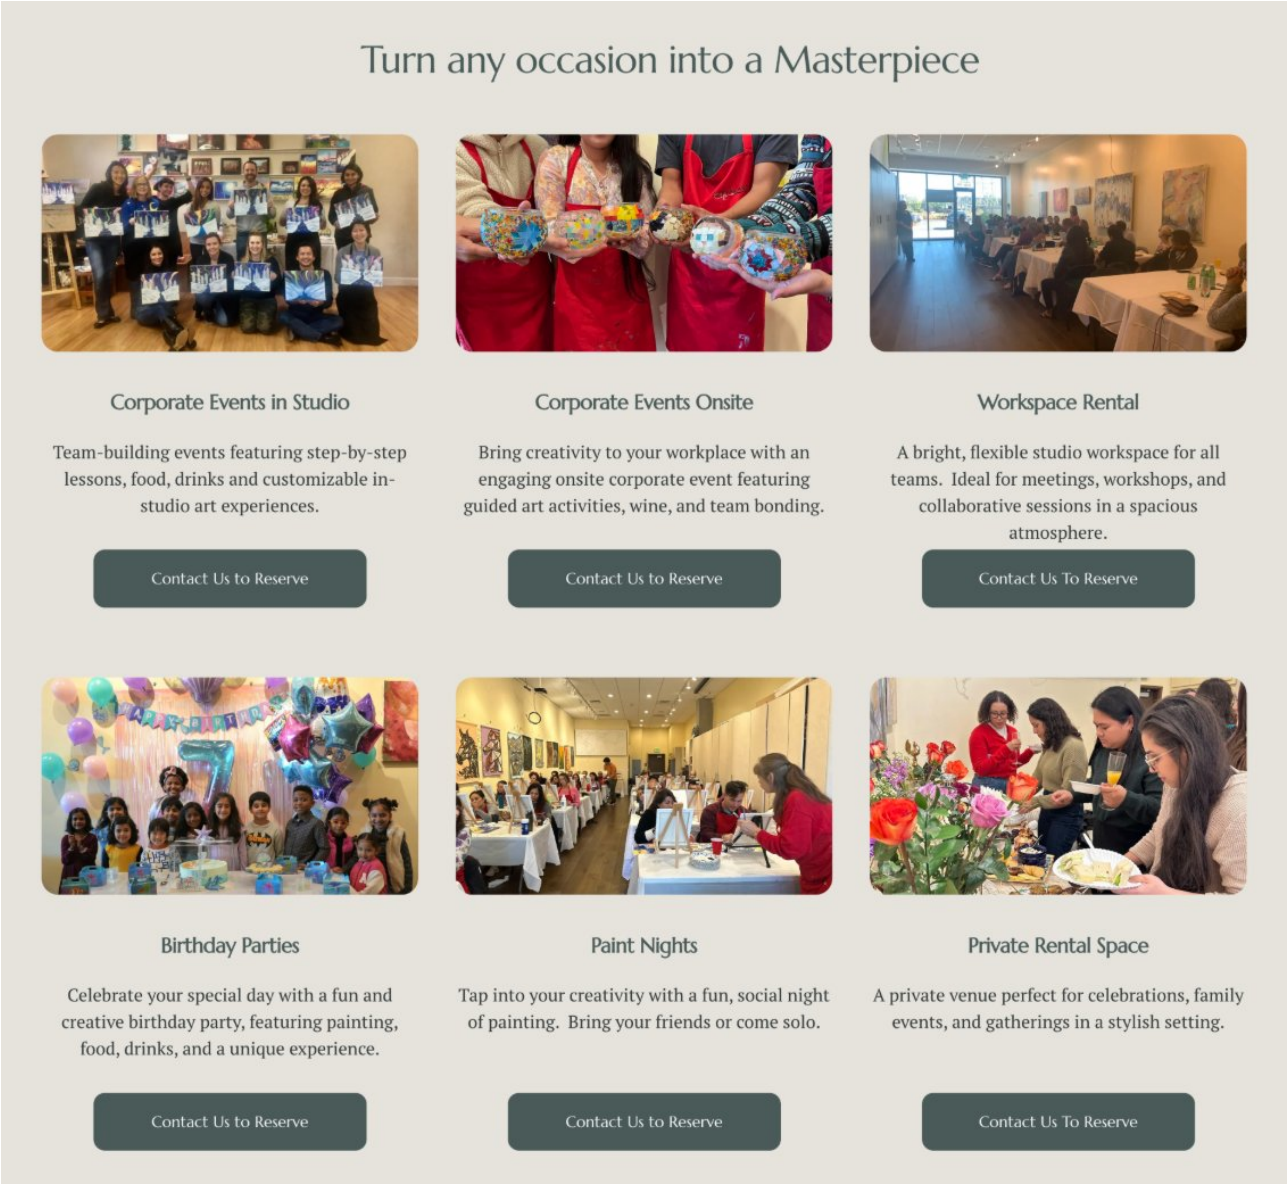

Full-page capture of the home page, taken Oct 15, 2026. Top of page (hero and logo wall):

Observed here: the navigation wraps onto two rows on desktop; the hero lists eight workshop types in a single emoji-separated paragraph; the only hero action is "Contact Us to Plan your event", which opens the contact form; the phone number does not appear above the fold.

Middle of the page (event cards):

Observed here: six service cards all use the same "Contact Us to Reserve" button and none shows a price, group size or duration.

3. Findings and priorities

Area	Finding	Priority	Recommended fix
Performance	Mobile LCP 17.9 s in lab, 3.4 s for real users. The LCP element was not named in the report; the large hero photo is the likely candidate (to verify).	High	Serve the LCP image resized as WebP/AVIF, with width/height set and high fetch priority.
Performance	969 KiB unused JavaScript, 124 KiB unused CSS, 120 KiB legacy JavaScript, render-blocking requests (est. 1,650 ms).	High	Load only the scripts and styles the home page needs; defer the rest.
Performance	Page weight 2,950 KiB; 131 KiB possible image savings. The page carries 20+ logo images plus many photos (Lighthouse flags image delivery).	High	Lazy-load everything below the fold; compress and size images per screen.
Performance	10 long main-thread tasks, TBT 510 ms, 2.9 s of main-thread work.	Medium	Remove unused scripts, split heavy ones, avoid layout-forcing code (forced reflow flagged).
Conversion	Every button leads to the contact form. The phone number (650-773-3587) appears only in the footer. No price, package or group-size info on the home page.	High	Add a sticky Call / Chat button, a short "how booking works" strip, and group size and starting-price hints (prices from the client).
SEO	Title is "Canvas & Cafe | Unleash Creativity Today": no service or city.	Medium	Use e.g. "Paint & Sip and Corporate Team Events in Foster City, Burlingame & SF".
Structure	H1 is the brand name only; cards use H4 with no H3 above (Lighthouse: headings not in order).	Medium	H1 with the main offer, then H2 sections and H3 cards.
Content	Burlingame is called a "new location" in the footer; San Francisco (Club Fugazi) is missing there; the rental text says "both locations" while three are listed; the Turkish Mosaic event says "in a few days" with no date.	Medium	One consistent location block; real dates on events.
Accessibility	Buttons without an accessible name (Lighthouse). Headings out of order.	Medium	Add aria-labels to icon buttons; fix heading levels.
Best Practices	Console errors logged; CSP, HSTS, COOP and Trusted Types not set.	Low	Fix the console errors; add security headers where the host allows.
Agentic	Accessibility tree not well-formed (1 of 2 checks).	Low	Resolved largely by the semantic fixes above.
Design	Hero list of 8 workshops as a text paragraph; one photo repeats on the page (Corporate Events and the gallery).	Low	Turn the list into tappable workshop chips; use a different photo per card.
To verify	Footer copyright year, structured data (Lighthouse lists it as a manual check), real-phone mobile layout.	-	To be checked on device before final recommendations.

Some performance items are likely tied to the current site builder (images are served from a Squarespace CDN). A custom front end removes most of those limits.

4. UI review

What works: warm beige and slate-green palette, readable serif headings, real photos of real guests. The brand feels welcoming.

What can be sharper: (1) the hero needs a second, faster action next to the form button, such as a call or chat; (2) the nav wraps on two lines on desktop; (3) the logo wall logos render small and light, so the strongest proof (Google, Meta, Stripe) is easy to miss; (4) testimonials are long blocks of text, a short quote plus company badge would scan faster on mobile; (5) service cards need a one-line detail (group size, duration, or "request a quote").

5. Strengths

• Strong proof: 100+ company logos, EY, Meta and Google testimonials, Yelp Badge of Excellence 2023 and 2024.
• Clear value in the first paragraph: step-by-step classes, coffee, snacks, wine; no experience needed.
• Wide range of workshops (canvas, resin, ceramic, mosaic, candle and soap, jewelry, neon).
• Three locations with highway and parking directions.
• Lighthouse SEO 100, Accessibility 92, Best Practices 96; CLS 0; every image has alt text.

6. Four-week plan

Week	Work
1	Speed: compress and resize hero and gallery images, lazy-load logo wall, remove unused scripts and CSS. Re-test mobile Lighthouse.
2	Home page redesign: workshop chips, sticky Call / Chat button, booking steps strip, consistent location block.
3	SEO and structure: new title and description, correct H1/H2/H3, accessible button names, event dates.
4	QA on real phones, tracking for calls and form sends, handover and measurement against today's scores.

7. Demo

We built a one-page demo using your own text and photos: softosync.github.io/client-demos/canvas-and-cafe/. It is a design preview, not a live site.

8. Next steps

Pricing would be phased (speed fixes first, then redesign), and we would agree on it with you before any work. If this is useful, we can walk you through it in a short call, or chat first on WhatsApp.
