After-hours calls and scheduling, handled

A proposal prepared for Greene's Plumbing, Heating & Electrical
Tiffin, Ohio

Prepared by Muhammad Zain, Business developer, Softosync
October 28, 2026

1. Our understanding of Greene's

Greene's is a family-owned plumbing, heating and electrical company in Tiffin, Ohio, serving Tiffin, Fremont and Findlay. Its site lists Ohio licence #24118, Better Business Bureau accreditation and 24/7 emergency service, and it presents a team that clearly cares about customers: when you call during office hours, a live person greets you, and the dispatcher helps you schedule an appointment or book a consultation.

What is already working well

- A real dispatcher answers the phone during office hours, and the co-owner and marketing team step in when the phones get busy. That human touch is a genuine strength and should stay.
- Clear service tiers on the Scheduling page: emergency, non-emergency (aimed within 3 days of the first call), consultation, and maintenance (requested at least one week ahead).
- A defined list of what counts as an emergency: flowing water, no water, gas leaks, electrical fire hazards, no electricity, no heat, no toilet.
- A Podium chat widget and a service request form are already on the site, and the site's SEO audit scored 100/100.

The operating setup we looked at

Observation (from greenesplumbing.com)	Why it matters
Office hours are Monday to Friday, 8:00 AM to 4:30 PM; Saturday and Sunday are closed.	Calls outside those hours reach voicemail, while the company promises 24/7 emergency service.
The Emergency Services page says the emergency line is found on the voicemail message and that the number occasionally changes.	A caller in an emergency has to listen to a message, then dial a second number. Some will hang up and try a competitor.
The service request form and the phone are the main routes to a booking; the dispatcher schedules non-emergency work by hand.	Every routine request needs a person to take details, check technician availability and confirm back.
The Office Assistant role is described as answering and making phone calls, sending invoices, filing and submitting purchase orders.	Repetitive office tasks compete with the dispatcher's time for customers who need a person.

These are observations from the public website only. We have not seen Greene's internal tools, and the proposal below is designed to be adjusted once we understand how the office actually runs.

2. Specific problems we found

#	Finding	Evidence
1	**After-hours emergency callers face a two-step path.**	Emergency page: the emergency line is on the voicemail message and the number occasionally changes. Office closed Saturday and Sunday.
2	**Routine scheduling is fully manual.**	Scheduling page describes the dispatcher taking details by phone and adding non-emergency calls to a servicing list; target is within 3 days.
3	**Busy phones pull other team members off their work.**	The Scheduling page says Pam and Rebecca step in when the phones get busy.
4	**The homepage is slow on mobile.**	Live mobile Lighthouse run on October 28, 2026: performance 40/100; Largest Contentful Paint 7.9 s; 261 requests and 3.5 MiB, of which 256 requests are third-party. Accessibility 89/100, SEO 100/100.
5	**Several third-party scripts compete for load time.**	The audit flagged unused JavaScript from a Google reviews widget (about 192 KiB), the Podium widget (about 138 KiB) and Google tag scripts (about 130 KiB, 76 KiB and 63 KiB).

Strengths we would protect

- The accurate, plain-language emergency definitions on the Scheduling page become the rules the call agent follows. We would use Greene's own wording rather than invent new ones.
- The warm, personal tone of the team. Customers who want a person will always be able to reach one.
- SEO foundations that already score 100/100.

3. Proposed solution

We propose a **Softosync AI Calling Agent** that works alongside the dispatcher, not instead of her. It answers when the office cannot, collects the details the dispatcher would ask for, and hands over a clean, structured request.

What the agent would do

- **After hours and weekends:** greet the caller in Greene's name, ask whether it is an emergency using Greene's own emergency list, collect name, address, phone number and a description of the problem, and send an instant text or email alert to whoever is on call. No second number to dial.
- **When the office line is busy:** pick up overflow calls, take a callback request and add it to the dispatcher's queue, so a ringing phone never sits unanswered.
- **Routine requests:** capture service type, system details and preferred days for non-emergency calls and consultations, and place them in a request queue for the dispatcher to confirm. Nothing is booked without Greene's approval rules.
- **Safety first:** any mention of a gas smell, sparking or fire is routed straight to the on-call person with an urgent alert, and callers are told to contact emergency services where appropriate.
- **Always a human option:** callers can ask for a person at any point, and the agent hands the call off or takes a priority callback.

Supporting automation (AI automation)

- Service request form and phone requests land in one shared inbox or sheet with the same fields, so nothing is retyped.
- Automatic confirmation texts or emails, and maintenance reminders ahead of annual clean-and-check visits from the service agreement program.
- Optional: a draft invoice reminder workflow so the office assistant's time goes to customers.

Website speed pass (web development)

- Review the third-party scripts listed above and load only what a visitor needs first, so the mobile page becomes usable faster. The Wix site, content and design stay as they are.

4. Phased plan

Phase	What happens	Result
1. Discovery	A short call with the dispatcher and office manager. Walk through a typical day, the emergency escalation chain, who is on call and what details a technician needs.	Agreed call flow, escalation rules and the information fields to collect.
2. Design	Write the greeting and conversation script in Greene's own words using the Scheduling and Emergency pages. Define when the agent hands over to a person. Choose where requests land.	Approved script and routing map.
3. Build and connect	Configure the AI Calling Agent, connect the phone number or call forwarding, set up on-call alerts and the shared request queue. Wire the website form into the same queue.	Working agent in a test environment.
4. Test with the team	Place test calls for each scenario: emergency, routine repair, consultation, wrong number, caller asks for a person. Adjust wording and rules.	Signed-off behaviour and a short staff guide.
5. Soft launch	Switch on for after-hours calls only, with the dispatcher reviewing every transcript for the first weeks.	Live coverage with low risk.
6. Extend	If it is working well, add busy-line overflow, confirmation messages and maintenance reminders. Run the website speed pass.	Wider coverage, measured results.

5. Timeline

Window	Milestone
Week 1	Discovery call and script draft
Weeks 2 to 3	Build, connect and internal testing
Week 4	Team test calls and adjustments; after-hours soft launch
Weeks 5 to 6	Review transcripts together; add overflow and reminders; website speed pass

The timeline is an estimate and depends on how quickly the team can join the discovery and testing calls.

6. Why Softosync

- **Practical, hands-on engineers.** We build and run our own systems, including AI calling and workflow automation, and we explain them in plain language.
- **Built around your people.** The goal is more time for your dispatcher and owners, with a person always one step away for customers who want one.
- **Phased and measurable.** We start with after-hours calls, review real transcripts with you and only then widen the scope.
- **Full-stack under one roof.** AI automation, web development, mobile apps, custom software, cloud and digital marketing (SEO, GEO and ads).

7. Next steps

- Reply to our email or message us on WhatsApp Business at +92 308 2615761, whichever you prefer.
- We will set up a short call (about 20 minutes) to hear how your calls and scheduling work today.
- After that call, we will send a scoped plan for phase 1 and 2 for your review.
