

WEBSITE & PERFORMANCE AUDIT

LIMS Legacy Singapore

limslegacy.com

Prepared for the LIMS Legacy team by Softosync

Audit date: 9 November 2026

Muhammad Zain · Founder, Softosync · zain@softosync.com · +92 308 2615761

softosync.com

1. Summary

We reviewed limslegacy.com the way a first-time online buyer would, then measured it with Google PageSpeed Insights. This report lists what we verified on the live site, the exact measurements, and a four-week plan. Real strengths are included alongside the issues.

The finding that matters most for sales

Pre-orders ask for the most trust and give the least reassurance. The banner shown on every page says pre-orders arrive “around END JANUARY 2026”. That date passed nine months ago (it probably means 2027). The Delivery & Exchange page requires full payment to confirm a pre-order, does not accept deposits, gives a 24-hour cancellation window, and states a production lead time of 8 to 16 weeks with no refund for delays. For pieces priced from $490 to $1,350 in the sale section, a new online buyer is asked to commit fully with very little visible reassurance. (Policy wording to be re-confirmed against the live page before publication.)

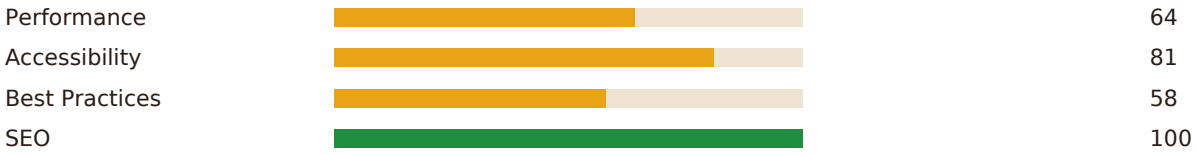

Scores at a glance

Measured 9 Nov 2026, 19:09–19:11 UTC, Google PageSpeed Insights (Lighthouse 13.6.0).

Page / device	Perf.	Access.	Best pr.	SEO
Homepage · mobile	**64**	**81**	**58**	**100**
Homepage · desktop	**77**	**82**	**58**	**100**
/collections/all · mobile	**77**	**86**	**81**	**85**

Bands: 90–100 good · 50–89 needs improvement · 0–49 poor. A second mobile run on the same day returned Performance 57 and LCP 12.6 s, so scores vary a few points between runs.

Homepage mobile score gauges

2. Core Web Vitals

Measured 9 Nov 2026, 19:09–19:11 UTC, Google PageSpeed Insights (Lighthouse 13.6.0). Thresholds: LCP good ≤ 2.5 s, poor > 4.0 s · CLS good ≤ 0.10, poor > 0.25 · INP good ≤ 200 ms, poor > 500 ms.

Metric	Mobile	Desktop	Meaning for visitors
LCP	**12.5 s · poor**	**2.4 s · good**	Time until the largest element appears (lab test).
CLS	**0.051 · good**	**0.149 · needs improvement**	Desktop: the collection list, navigation and WhatsApp widget shift while loading.
INP	**63 ms · good**	**28 ms · good**	Taps and clicks respond quickly (real-user data).

Real-user (CrUX, 28-day) data: fast

Google's field data for limslegacy.com rates the site **fast**: LCP 1,297 ms, INP 63 ms, CLS 0, FCP 970 ms, TTFB 232 ms. Typical visitors are well served. The lab figures above come from a deliberately throttled mobile test; they show how the page behaves on slower phones and connections, and where the page is heavier than it needs to be.

The LCP element (homepage, mobile)

The element that appears last is the **logo** (250 × 245 px), not a hero image. Its load is held up by a script: **3,265 ms** pass before the browser even requests it. Phase breakdown: server response 5 ms · resource load delay 3,265 ms · resource load 29 ms · render delay 117 ms. Loading the logo directly in the page, with high priority, removes most of the wait. On desktop the LCP element is the first banner image (1000 × 666 px) with a 1,861 ms load delay.

Supporting lab metrics (homepage, mobile)

Metric	Value	Status
First Contentful Paint	0.9 s	**Good**
Server response (TTFB)	10 ms	**Good**
Total Blocking Time	240 ms	**Needs improvement**
Speed Index	6.8 s	**Poor**
Time to Interactive	14.8 s	**Poor**

Page weight (mobile): 279 requests, 3.6 MiB. Third-party code: 64 requests, 1.5 MiB. The YouTube "Our Story" embed alone accounts for 992 KiB in 9 requests.

3. What is slowing the page down

From get_speed_opportunities (mobile, homepage). Sizes are as reported by Lighthouse; estimated savings are not additive.

File	Size	Est. saving	Issue
youtube.com … player_embed_es6 / base.js	472 KiB	335 KiB	71% unused. Loads as the page opens, before anyone presses play.
cdn.shopify.com … forms-2694 / index.js	260 KiB	244 KiB	94% unused JavaScript.
youtube.com … ytembeds (2 files)	222 + 155 KiB	113 + 75 KiB	About half unused.
preorder-now-source.js (preorder app)	39 KiB	24 KiB	60% unused; also 11 KiB saved by minifying.
jquery-2.2.3.min.js	30 KiB	up to 1,289 ms	Render-blocking.
theme.scss.css	22 KiB	up to 967 ms	Render-blocking; 79% unused.
sca-pp-initial.js / sca-pp.css	25 / 28 KiB	up to 1,289 ms	Render-blocking; the CSS is 100% unused.
files/3_720x.png	99 KiB	51 KiB	Oversized image; use WebP/AVIF.
files/4_6bbbf547…_720x.png	91 KiB	43 KiB	Oversized image.
files/Website_Banner_2_720x.png	80 KiB	24 KiB	Oversized image.
files/Lims-7_1382d3d6…_720x.jpg	80 KiB	23 KiB	Oversized image.
beeapp.me/image/whatsapp/green.png	16 KiB	14 KiB	WhatsApp widget image; no cache lifetime.

Totals: unused JavaScript 814 KiB · unused CSS 155 KiB · image delivery 240 KiB · render-blocking requests delay first render by up to 1.3 s on mobile.

4. Issues and fixes

Priority: **High** · **Medium** · **Low**. Items marked “to verify” could not be fully confirmed.

Area	Finding	Priority	Fix
Pre-orders	Banner date “END JANUARY 2026” has passed; policy asks full payment, no deposits, 24-hour cancellation, no refund for delays (to verify the policy is current).	**High**	Replace the banner with a clear pre-order block: arrival window, payment and exchange terms beside Add to Cart.
Page weight	YouTube player (992 KiB, 9 requests) and Shopify forms script load on page open.	**High**	Show a thumbnail and load the player on click; load app scripts only where needed.
LCP	Logo is the LCP element and waits about 3.3 s on a script before loading (lab, mobile).	**High**	Serve the logo directly with high priority.
Contact	Three outlets listed with phone numbers, but no opening hours and no email address on the Contact page; the page meta description lists different unit numbers from the page body.	**Medium**	Add hours and one email; align addresses.
Delivery fees	Footer: $30 / $60. Delivery & Exchange page: $25 / $50 (to verify which is current).	**Medium**	Show one fee table from a single source.
Render-blocking	jQuery 2.2.3, theme CSS, sca-pp JS/CSS block first render.	**Medium**	Defer or inline critical CSS; remove unused app code.
Images	~240 KiB savable; banner and gallery images appear to have empty alt text (to verify count).	**Medium**	WebP/AVIF, correct sizes, descriptive alt text.
Layout shift	Desktop CLS 0.149 from collection list, nav, WhatsApp widget.	**Medium**	Reserve space with fixed dimensions.
Accessibility	No lang attribute on <html>; iframe has no title; banner slide link has no accessible name; low-contrast text; 12 × 12 px touch targets.	**Medium**	Add attributes; raise contrast and target size to 24 px or more.
Consistency	Homepage says “more than 50 years”, About Us says “more than 60 years”.	**Low**	Use one figure.
Typos	“order orders”, “not not”, “circumstamces”, “Term’s & Condition’s”.	**Low**	Proofread policy pages.
SEO	/collections/all has no meta description; some links are not crawlable.	**Low**	Add descriptions; use real href links.
Navigation	“Chair” and “Chairs & Stools” both link to /collections/ceramic-elephants (to verify).	**Low**	Check the menu mapping.
Structured data	Schema could not be checked from fetched content (to verify).	**Low**	Add Product and LocalBusiness schema.

5. UI review

The homepage opens with a six-slide banner carousel, a “Shop For” category grid, a “Further Reduction Sale” row of nine product names with prices, the founder story, a video, an Instagram strip and an awards note. The story and the product range are strong; the issue is how much the page loads and how little a buyer is told before paying. Sale items list a product name and price without visible lead-time or delivery information next to them. Navigation is clear, with two levels under Furniture and Homeware. Small carousel dots and low-contrast category links are hard to tap and read on mobile.

6. Strengths

• SEO score 100/100 on the homepage.
• Server responds in 10 ms; first paint at 0.9 s on mobile.
• Real-user data rates the whole site fast (LCP 1.3 s, INP 63 ms, CLS 0).
• A genuine 1959 family story and recognition: Top 5, Expat Living Readers’ Choice Awards 2025 (Singapore).
• Three physical outlets, WhatsApp for online enquiries, and broad payment options (Visa, Mastercard, Amex, Apple Pay, Google Pay, Shop Pay, UnionPay).
• A Shopify base that is easy to extend; footer year is current (2026).

7. Four-week action plan

Week	Focus	Outcome
1	Pre-order clarity, banner date, one delivery-fee source	Buyers see what they commit to before checkout.
2	Speed quick wins: video thumbnail, defer app scripts, logo loading, image formats	Lighter page; lab LCP down; re-measure.
3	Accessibility fixes, outlet hours, email, meta descriptions, schema	Easier to use, find and trust.
4	Homepage redesign live on the current Shopify store; final PageSpeed run	Before/after numbers shared.

8. Demo and next steps

We built a homepage concept from your own text and images, including a plain-language pre-order summary and a video thumbnail that loads the player only on click:

https://softosync.github.io/client-demos/lims-legacy/

Demo measurement (mobile, 9 Nov 2026, 19:25 UTC, Google PageSpeed Insights): Performance **99** · Accessibility **100** · Best Practices **100** · LCP **2.1 s** · CLS **0**. The SEO score shows 63 only because the demo is deliberately set to “noindex”. The demo is a front-end concept without the live store’s apps, checkout and full catalogue, so a production build will land lower than this; we would re-measure after launch.

Next step: a 20-minute call to walk through the findings and the demo. We suggest three phases: quick fixes, the homepage redesign on your Shopify store, then optional SEO work. Examples of our work: softosync.com/portfolio. Contact: Muhammad Zain, zain@softosync.com, +92 308 2615761 (phone and WhatsApp).
