WEBSITE AUDIT & REDESIGN PROPOSAL

MEGALIGHT

megalightph.com

Prepared for: MEGALIGHT, Philippines

Prepared by: Muhammad Zain, Founder, Softosync

Date: 9 October 2026

1. Summary

MEGALIGHT presents three lighting ranges on a simple site: Commercial / Residential, Industrial and Solar. The pages load quickly on desktop, but the content is thin: the home page, About page and product pages carry only short text, product tiles show names and images, and the contact page lists a San Pedro, Laguna address and two Gmail addresses. This audit lists what we could verify, what we could not, and a practical plan to turn the site into a tool that brings in quote requests.

PageSpeed Insights, desktop (report of 9 Oct 2026, 10:02 AM, Lighthouse 13.5.0)

Category	Score	Rating
Performance	87	Needs improvement (50-89)
Accessibility	76	Needs improvement (50-89)
Best Practices	78	Needs improvement (50-89)
SEO	83	Needs improvement (50-89)

Metric	Value	Status
First Contentful Paint	0.9 s	Good
Largest Contentful Paint	2.0 s	Needs improvement
Total Blocking Time	0 ms	Good
Cumulative Layout Shift	0.003	Good
Speed Index	1.7 s	Needs improvement

Mobile PageSpeed result: **to verify** (only the desktop report was available for this audit). Real-user (field) data: "No Data" in the report.

2. Screenshot evidence

3. Findings and recommended fixes

Priority: **High** = affects leads or trust directly; **Medium** = clear improvement; **Low** = polish. Items marked "to verify" were not confirmed.

Area	What we found	Priority	Recommended fix
Contact page	Contact page lists address 158 San Vicente Street, San Pedro, Laguna, a landline and two Gmail addresses. No contact form, WhatsApp/Viber link or map was visible in the page text. The Facebook page for MEGALIGHT lists a different address (Valenzuela) and email, so the current details need confirming.	High	Confirm current branch, phone and email. Add a quote-request form, click-to-call and a chat button, and a map.
Product pages	Pages show product names and images (Downlights, Panel Lights, T5/T8 Tube Lights, Highbay, Floodlight, Gas Station Light, Ministreetlight, Streetlight). No wattage, specs, price range or inquiry button was visible in the page text (details inside images: to verify).	High	Add a short spec table and a "Request a quote" button per product; use real alt text for each image.
Images / speed	PageSpeed (desktop) flags "Improve image delivery" with estimated savings of 524 KiB; LCP is 2.0 s and Speed Index 1.7 s.	High	Compress and resize images, serve modern formats (WebP/AVIF), and preload the hero image.
Security / trust	The site loaded over http://, and no redirect to https was observed during our check (to verify in a browser).	High	Enable an SSL certificate and redirect all pages to https.
Home page content	Home page has a tagline and three category cards only. No featured products, projects, brands, or customer proof.	Medium	Add featured products, a "where we light" section, project photos and a clear quote call-to-action.
About page	About page has three sentences ("We are the solution to your problems...") and no company history, location, brands or certifications.	Medium	Add the company story, product quality and warranty information, service areas and team/contact.
Meta descriptions	Home and Products pages share the same description ("Your lighting needs for your office, malls, schools, homes, and more!"). The Commercial/Residential and Industrial pages use a single word ("Downlights", "Highbay").	Medium	Write a unique 140-160 character description per page with product and city keywords.
Navigation links	On the Products page the three "BROWSE" buttons use javascript: links instead of real URLs.	Medium	Replace with normal page links so visitors and search engines can follow them.
Accessibility	Accessibility score is 76. The failing items are not visible in the screenshot (to verify).	Medium	Run the full report; fix contrast, alt text and link names first.
Render-blocking	PageSpeed lists render-blocking requests with estimated savings of 730 ms.	Medium	Defer non-critical CSS/JS and load fonts with font-display: swap.

Area	What we found	Priority	Recommended fix
Caching / JavaScript	PageSpeed lists efficient cache lifetimes (71 KiB) and legacy JavaScript (20 KiB).	Low	Set longer cache headers and ship modern JavaScript on a rebuilt site.
Platform	The footer shows "Powered by Weebly". Template platforms limit custom features and speed tuning.	Low	Move to a custom-built site that can grow with a product catalogue.

4. UI review

Based on the PageSpeed preview and the page content we could read (we did not test on a phone).

- The home hero is a large warehouse photo with the tagline over it. In the preview the tagline sits over a busy image, so readability on small screens is to verify.
- Navigation is clear and short (Home, Products, About, Contact), which is a good base to keep.
- The three category cards are the strongest part of the layout and map to how customers shop (commercial, industrial, solar).
- There is no visible call-to-action above the fold (such as "Get a quote" or "Call us").

5. What already works

- Fast first load on desktop: First Contentful Paint 0.9 s, Total Blocking Time 0 ms, Cumulative Layout Shift 0.003.
- A clear three-range structure that matches real buying needs (Commercial / Residential, Industrial, Solar).
- Specific product names that people actually search for (downlights, panel lights, highbay, streetlight, solar lighting).
- SEO score of 83 and a working, simple menu: a solid starting point for improvement.

6. Four-week action plan

Week 1	Confirm business details (address, phone, email, branches). Collect product photos and specs. Agree on pages and tone.
Week 2	Design the home page and product page template. Set up https, hosting and image optimisation.
Week 3	Build product pages with spec tables and quote buttons. Add contact form, click-to-call and chat. Write unique page titles and descriptions.
Week 4	Test on phones and desktop, re-run PageSpeed, fix issues, then launch and set up basic analytics.

7. Home page demo

We built a home page concept using only the text and structure that already exist on your site (tagline, three ranges, product names, About line). It is a design demo, not a live site, and it is hidden from search engines.

Open the demo

<https://softosync.github.io/client-demos/megalight/>

<https://softosync.github.io/client-demos/megalight/>

Photos in the demo are free stock images (Unsplash) used as stand-ins; in the real build we would use your own product and project photos.

8. Next steps

- A short call or online meeting (15-20 minutes) to review this audit and the demo.
- We confirm the pages, products and contact details you want on the new site.
- We send a phased proposal: Phase 1 home page and product pages, Phase 2 quote forms and SEO, Phase 3 extras such as WhatsApp ordering or AI automation.
