1. Our understanding of your practice

Burnt Ash Veterinary Clinic is an independent, family-run practice that has operated from 146 Burnt Ash Hill since 1947. Your website says the vet has more than 40 years of experience, and the reviews on your homepage are consistently warm, with several clients saying they have been coming for 15 to 25 years. That kind of trust is the most valuable thing the practice has, and nothing in this proposal is meant to change it.

How the practice works today, based on your public website

Area	What we saw
Booking	Every pet must have an appointment before arriving, and walk-ins are not seen. Appointments are made by phone or email. We found no online booking option.
Hours	Reception Mon to Fri 08:00 to 19:00 and Sat 08:00 to 12:00. Consulting appointments Mon to Fri 08:00 to 10:00 and 16:00 to 19:00, and Sat 08:00 to 12:00. Sunday closed.
New clients	New customers must register first. The FAQ asks them to call and be guided through the steps, and a separate pet registration form is available online.
Prescriptions	A repeat prescription form asks for a valid authorisation on the pet's record and allows 24 hours for dispensing. If the authorisation has expired, the clinic contacts the client to arrange a review.
Payments	By phone or by card and cash at the practice, due at the time of consultation or on collection after surgery.

What is already working well

- A trusted, long-established local practice with strong reviews and easy customer parking.
- Clear opening times and a visible call button on every page of the site.
- A technically sound site foundation. Our mobile audit today scored SEO 100/100, Best Practices 96/100 and Accessibility 95/100, with layout shift of only 0.024.
- Phone lines that are staffed throughout the day Monday to Friday, so callers reach a person. We would protect that, not replace it.

2. Specific problems we found

These are observations from your website and a mobile Lighthouse audit run on 9 November 2026. We have not seen your phone logs or practice software, so the first phase of the plan is to confirm them with you.

#	Finding	Why it matters
1	Booking depends entirely on a phone call or an email.	Reception takes every booking call. When the line is busy or the office is closed, we found no other way for a client to ask for an appointment.
2	Consulting runs in two short windows on weekdays (08:00 to 10:00 and 16:00 to 19:00).	Consulting happens in short windows, so a missed call may mean a client books elsewhere. A booking tool that knows the windows can offer the right slots at any hour.
3	New-client registration and repeat prescriptions each use a long form, and registration needs a phone call as well.	Registration involves both a phone call and a long form. A guided, shorter flow would reduce typing for clients and could cut repeat data entry for staff.
4	Expired prescription authorisations lead to a call-back to arrange a review.	Each call-back is a task for reception. Automated status messages and a one-tap booking link for the review would close that loop.
5	Mobile performance score of 57/100, with first contentful paint at 6.5 seconds.	The audit traced about 452 KiB of unused JavaScript mainly to the reCAPTCHA and Google Tag Manager scripts. Clients opening the site from a phone while their pet is unwell may wait before seeing the phone number.

Audit snapshot (mobile, 9 November 2026)

Metric	Result	Metric	Result
Performance	57 / 100	**SEO**	100 / 100
Accessibility	95 / 100	**Best Practices**	96 / 100
First Contentful Paint	6.5 s	**Cumulative Layout Shift**	0.024
Total transferred	2.3 MiB, 56 requests	**Server response (TTFB)**	10 ms

3. Proposed solution

We propose a small, staged set of tools that sit alongside your reception team. Staff stay in charge, and the vet makes every clinical decision.

A. AI Calling Agent (Softosync product)

- Answers calls when the line is busy and outside reception hours, in a natural voice, using your own opening times and consulting windows.
- Books, moves and cancels appointments, collects owner and pet details for new registrations, and takes repeat prescription requests for the team to approve.
- Does not give clinical advice. Anything urgent or unclear is passed to a person straight away, using an escalation script that your vet writes.
- Sends the team a short written summary of every call, so nothing is lost.

B. Simple online booking and registration request

- One mobile-friendly page where a client picks a time, or sends a registration or repeat prescription request, in a few taps.
- Uses the same rules as the phone agent, so the clinic works from one diary.
- Appointment reminders by text message or WhatsApp to reduce no-shows.

C. Speed and tidy-up of the current website

- Load the reCAPTCHA and tag scripts only when needed, compress and cache images, and remove unused styles.
- Keep your content, your look and your search ranking, and retest after every change.

Principles we would follow

- Pilot first. The agent starts on overflow and after-hours calls only, and reception reviews its transcripts daily.
- Data protection by design. Call disclosure, retention and access are set up in line with UK GDPR, and your client details are not shared with third parties.
- Fits your existing practice software wherever possible. We would confirm what you use before building anything.

4. Phased plan and timeline

Phase	Steps	Timing
1. Discover	Short call with the vet and reception. Review a typical week of calls and forms. Confirm practice software, consulting rules and what staff want to keep doing by hand. Agree the escalation script.	Weeks 1-2
2. Pilot the phone agent	Configure the agent with your hours, windows and wording. Test with staff. Go live on overflow and after-hours calls only. Review transcripts daily and adjust.	Weeks 3-5
3. Online booking and reminders	Build the booking, registration and repeat prescription request page. Add appointment reminders. Connect everything to one diary.	Weeks 5-7
4. Speed and tidy-up	Defer heavy scripts, optimise images, retest mobile speed, accessibility and search basics. Fix the heading order and small touch targets found in the audit.	Weeks 6-8
5. Review	Compare call handling and booking results with the starting point. Decide together whether to widen the agent's hours or stop.	Week 8 onward

What we would need from the practice

- About 45 minutes for the discovery call and a short review of the agent's wording before go-live.
- Access to the diary or practice software, or a sample of how appointments are recorded today.
- Your decision on which calls must always go to a person.

Success looks like

- Fewer unanswered or abandoned calls during consulting hours.
- Clients able to book or register outside reception hours.
- Less time at reception spent re-entering form details and chasing prescription call-backs.

5. Why Softosync

- Software agency focused on AI automation, web and mobile, custom software, cloud and UI/UX, with our own products including the AI Calling Agent and Tallo ERP.
- We start from what already works. This proposal keeps your reception team, your content and your search strength, and adds capacity around them.
- Measured changes. We audit before and after, and we only report numbers we can show.
- Direct access. You work with one named contact and can reach us by call or WhatsApp.

Portfolio

6. Next steps

Step	What happens
1	You reply to the email, or message us on WhatsApp Business at +92 308 2615761, whichever you prefer.
2	We arrange a short call at a time that suits the practice, outside consulting hours.
3	We confirm the findings in this document, agree a scope for the pilot, and send a written plan.
